# Service Manual

**Network Camera**

**BL-C30C**  
**(for Canada)**

## Panasonic

### **IMPORTANT INFORMATION ABOUT LEAD FREE, (PbF), SOLDERING**

If lead free solder was used in the manufacture of this product the printed circuit boards will be marked PbF.

Standard leaded, (Pb), solder can be used as usual on boards without the PbF mark.

When this mark does appear, please read and follow the special instructions described in this manual on the use of PbF and how it might be permissible to use Pb solder during service and repair work.

# 1. ABOUT LEAD FREE SOLDER (PbF: Pb free)

## Note:

In the information below, Pb, the symbol for lead in the periodic table of elements, will refer to standard solder or solder that contains lead.

We will use PbF solder when discussing the lead free solder used in our manufacturing process which is made from Tin, (Sn), Silver, (Ag), and Copper, (Cu).

This model, and others like it, manufactured using lead free solder will have PbF stamped on the PCB. For service and repair work we suggest using the same type of solder although, with some precautions, standard Pb solder can also be used.

## Caution

- PbF solder has a melting point that is 50° ~ 70° F, (30° ~ 40°C) higher than Pb solder. Please use a soldering iron with temperature control and adjust it to 700° ± 20° F, (370° ± 10°C). In case of using high temperature soldering iron, please be careful not to heat too long.
- PbF solder will tend to splash if it is heated much higher than its melting point, approximately 1100°F, (600°C).
- If you must use Pb solder on a PCB manufactured using PbF solder, remove as much of the original PbF solder as possible and be sure that any remaining is melted prior to applying the Pb solder.
- When applying PbF solder to double layered boards, please check the component side for excess which may flow onto the opposite side (See figure, below).

## 1.1. SUGGESTED PbF SOLDER

There are several types of PbF solder available commercially. While this product is manufactured using Tin, Silver, and Copper, (Sn+Ag+Cu), you can also use Tin and Copper, (Sn+Cu), or Tin, Zinc, and Bismuth, (Sn+Zn+Bi). Please check the manufacturer's specific instructions for the melting points of their products and any precautions for using their product with other materials. The following lead free (PbF) solder wire gauge are recommended for service of this product:

**0.3mm, 0.6mm and 1.0mm.**

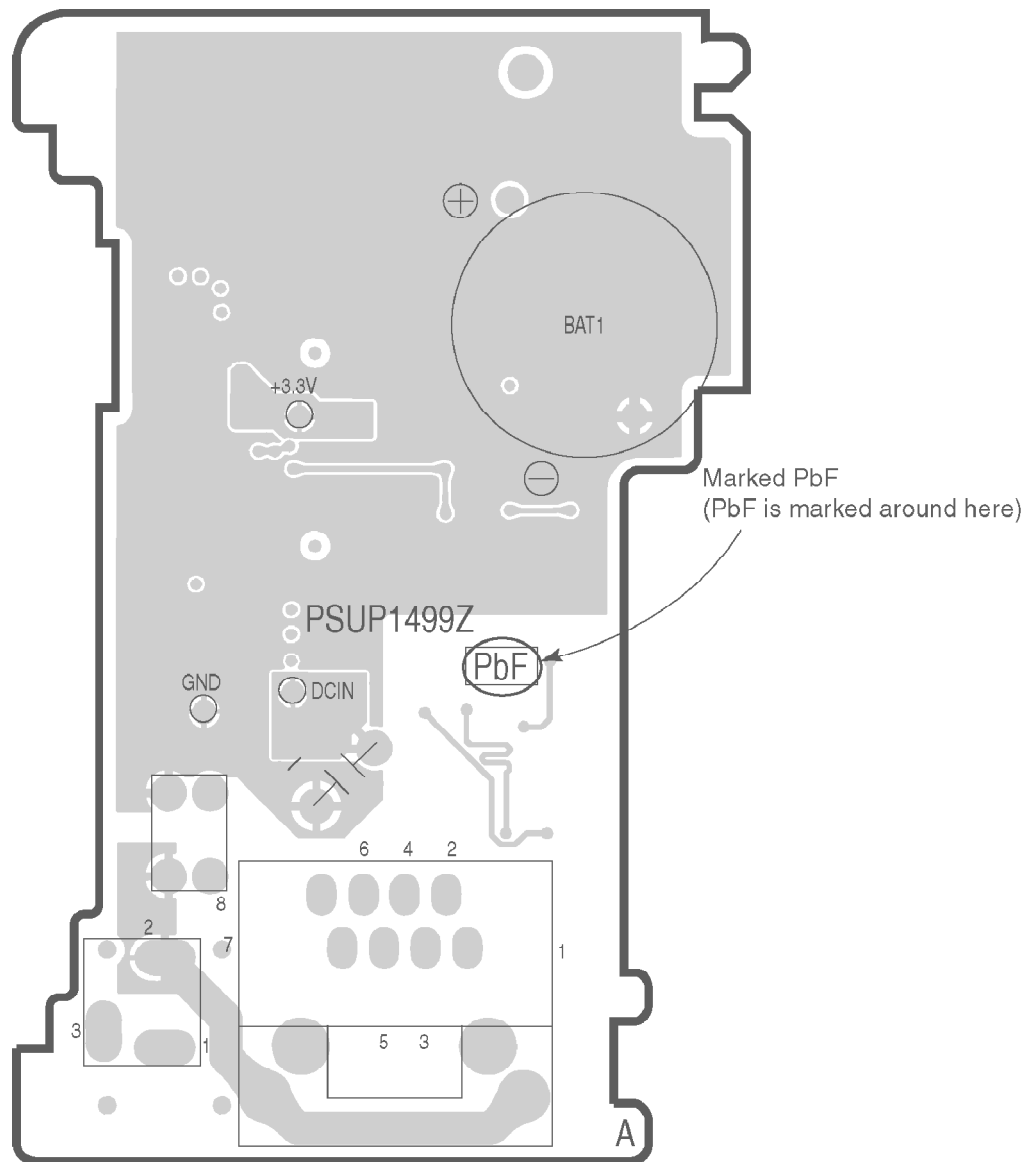

## **1.2. HOW TO RECOGNIZE THAT Pb FREE SOLDER IS USED**

**MAIN BOARD**

1

## I/O BOARD

**SUB BOARD**

Marked PbF (PbF is marked around here)

**LENS BOARD**

Marked PbF (PbF is marked around here)

**RF BOARD**

Marked PbF (PbF is marked around here)

## 2. FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When replacing, the following precautions will help to prevent recurring malfunctions.

1. Cover the plastic parts with aluminum foil.
2. Ground the soldering irons.

3. Use a conductive mat on the work-table.
4. Do not grasp IC or LSI pins with bare fingers.

### **3. CAUTION**

#### **3.1. SAFETY PRECAUTIONS**

1. Before servicing, unplug the power cord to prevent an electrical shock.
2. When replacing parts, use only manufacturer's recommended components for safety.
3. Check the condition of power cord. Replace if wear or damage is evident.
4. After servicing, be sure to restore the lead dress, insulation barriers, insulation papers, shields, etc.
5. Before returning the serviced equipment to the customer, make the following insulation resistance test to prevent a shock hazard.

#### **3.2. BATTERY CAUTION**

Danger of explosion if the battery is replaced incorrectly. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to following caution:

Disposal or transportation of lithium batteries should be performed by permitted, in accordance with federal, state and local guidelines.

A battery continues to have no transportation limitations as long as it is separated to prevent short circuits and packed in strong packaging.

Commercial firms that dispose of any quantity of lithium cells should have a mechanism in place to account for their ultimate disposition. This is a good practice for all types of commercial or industrial waste.

When the lithium battery is exchanged, the clock settings are cleared. In this case, make clock settings again.

Recommend Type Number:

CR-1632/1HF (BAT1) Manufactured by MATSUSHITA

#### **3.3. TRADEMARKS**

- Adobe and Acrobat are either registered trademarks or trademarks

of Adobe Systems Incorporated in the United States and/or other countries.

- Ethernet is either a registered trademark or a trademark of Xerox Corporation in the United States and/or other countries.
- Microsoft, Windows, Hotmail and ActiveX are either registered trademarks or trademarks of Microsoft Corporation in the United States and/or other countries.
- Pentium is a trademark or registered trademark of Intel Corporation or its subsidiaries in the United States and other countries.
- Screen shots reprinted with permission from Microsoft Corporation.
- All other trademarks identified herein are the property of their respective owners.

### **3.4. INSULATION RESISTANCE TEST**

1. Unplug the AC power cord and short the two prongs of the plug with a jumper wire.
2. Measure the resistance value with ohmmeter between the jumpered AC plug and each exposed metal cabinet part, such as screw threads, etc.

**Note:**

Some exposed parts may be isolated from the chassis by design. These will read infinity.

3. If the measurement is outside the specified limits, there is a possibility of shock hazard. The equipment should be repaired and rechecked before it is returned to the customer.

Ohm meter

Resistance = more than  $1\text{M}\Omega$  (at DC 500 V)

### 3.5. POWER CAUTION

The power socket wall outlet should be located near this equipment and be easily accessible.

### 3.6. CLEANING

Clean the camera after the camera is turned off.

#### 3.6.1. Cleaning the Main Unit

Clean the unit with a dry and soft cloth.

**Note:**

- **Do not use alcohol, polishing powder, cleanser, benzine, thinner, wax, petroleum products or hot water to wipe the camera. Also avoid pesticide, glass cleaner or hair spray. They may cause change in shape or color.**
- **Do not apply pressure to the pan/tilt portion of the camera. Any forced movement can damage the internal mechanism.**
- **If the pyroelectric infrared sensor has dust on it, it may not detect temperature differences. Keep the pyroelectric infrared sensor clean.**

### **3.6.2. Cleaning the Lens**

**If the lens has dust on it, the image may be unclear or out of focus.**

**Note:**

Do not touch the lens directly. Fingerprints may cause an unclear image.

## 4. SPECIFICATIONS

### Network Camera

Items	Specifications
Pan/Tilt Angle	Pan: -50° to +50°, Tilt: -40° to +10°
Number of Pixels	1/4-inch CMOS Sensor 320,000 pixels
Illuminance	1-10,000 lx
White Balance	Auto/Manual/Hold
Focus	Fixed 0.5m (20 inches) - Infinity
Caliber Ratio (F No.)	F2.8
Horizontal Viewing Angle	43°
Exposure	Auto

### Other Specifications

Items	Specifications
Video Compression	JPEG (3 Levels)
Video Resolution	640 x 480, 320 x 240 (default), 160 x 120
Buffered Image *1	About 250 frames (320 x 240) with time display
Frame rate *2	Max. 7.5 frames/second (640 x 480) Max. 15 frames/second (320 x 240 or 160 x 120)
Supported Protocols	TCP, UDP, IP, HTTP, FTP, SMTP, DHCP, DNS, DDNS, ARP, ICMP, POP3, N
Message Transfer Condition	Pyroelectric Infrared Sensor or Timer
Image Transfer Method	SMTP, FTP
Interface	Wired: 10Base-T/100Base-TX Ethernet RJ-45 connector x 1 Wireless: IEEE 802.11b/g (Embedded)
Sensor Detection Method	Pyroelectric Infrared Sensor
Sensor Range	Horizontally About 30°, Vertically About 85°, Distance About 5 m (16.4 feet) (When the temperature is 20 °C [68 °F])
Indicator Display	Power/Network Communication/Camera operation/Ethernet link
Dimension (HWD)	About 98 mm (3.86 inches) x About 74 mm (2.91 inches) x About 73 mm (2.87 inches)
Weight	200 g (0.44 lb.) (Only the unit)
Power Supply	AC adaptor: Input 120 V AC, 60 Hz Output 12 V DC, 750 mA Consumption: About 4.5 W (6.4 W during pan/tilt scan)
Temperature	Operation: +5 °C (+41 °F) to +40 °C (+104 °F) Storage: +0 °C (+32 °F) to +50 °C (+122 °F)
Humidity	Operation: 20%-80% (No Condensation) Storage: 20%-90% (No Condensation)

#### Wireless Specifications

Items	Specifications
Communication mode (Communication Standard)	IEEE 802.11b, 802.11b/g, 802.11g exclusive
Data Transfer Mode	Direct Sequence Spectrum Spread (DS-SS), Orthogonal Frequency Division Multiplexing (OFDM)
Frequency Range	2.412-2.462 GHz
Channels	1-11
Security	WEP (64/128/152 bit), SSID

\*1) The maximum number of frames changes depending on the image quality and what object you buffer.

\*2) Frame rate changes depending on the network environment, the PC performance, the image quality and what object you view.

## 4.1. ABOUT PYROELECTRIC INFRARED SENSOR

(See Panasonic Network Camera support website at <http://panasonic.co.jp/pcc/products/en/netwkcam/> for details about the pyroelectric infrared sensor.)

The sensor (pyroelectric infrared sensor) detects temperature differences with the infrared rays naturally emitted by human or animal bodies. The sensor trigger can activate buffering images to the internal memory or transferring images by E-mail or FTP. The detection range is about 30° horizontally, about 85° vertically and about 5-m (16.4 feet) distance. Since the detection range is easily affected by the environment temperature or how fast the object speed is, consider your mounting location.

**Note:**

- The sensor can easily detect temperature differences of objects moving sideways within the detection range, but cannot easily detect objects moving slowly towards the sensor. Mount the camera where the objects often pass across the detection range (see Figure 1).
- If the lens position does not match the sensor direction, the buffered or transferred images may not capture the object detected by the sensor (see Figure 2). We recommend you to set the pan/tilt range to match the sensor direction or to restrict the user's access level to disable the pan/tilt operation.

Figure 1

Figure 2

#### About Location

- If there is no temperature difference between human body and environment like in summer, the sensor may not detect anything.
- If the object is less than about 1 m (40 inches) away from the camera, the camera may detect the object outside the range.
- If the sensor is obstructed, the sensor does not detect anything. Remove the obstacle in front of the sensor.
- The sensor may malfunction in the following areas. Avoid these locations.

## **4.2. COLOR NIGHT VIEW MODE**

- Color night view mode (auto-adjusted) enables the camera to display images even in 1 lx illuminance.
- 1 lx is the brightness about 2.5 m (8.2 feet) away from auxiliary fluorescent light. Color night view mode slows down the frame rate, and images may blur when viewing a moving object or using the pan/tilt operation.
- When viewing a dark image, Color Night View mode automatically starts. The image will be brighter, but the refresh interval may slow down and image quality may decrease.
- When the camera is aimed at a dark object when in Color Night View mode, specks of white or colored light may appear in the image. This is a characteristic of the CMOS image sensor. The product is not malfunctioning.

## **5. MAIN FEATURES**

### **Wireless Communication**

Network Camera corresponds to the wireless system based on IEEE 802.11b/g. Wireless installation will play an increasing role in flexible mounting.

Communication via Ethernet<sup>®</sup> cable is also available. Encryption establishes the security on the wireless network.

### **Various remote monitoring features**

- Pyroelectric infrared sensor \*1 detects temperature differences caused by a human body or animals.
- Detection can let camera transfer images by E-mail or FTP \*2.
- Color night view mode (auto-adjusted) enables the camera to display images even in 1 lx illuminance \*3.

### **Monitoring from PC or mobile phone**

- The camera images can be monitored over the Internet.
- Pan/Tilt operation can move the lens horizontally from -50° to +50° and vertically from -40° to +10°.

### **Privacy mode**

- Privacy mode hides the lens into the unit to protect privacy.

- Pressing the privacy button on the front of the camera switches privacy mode on or off with a single touch.

	Privacy	Monitoring	Purpose
Privacy feature	On	Disabled	Protecting privacy
Monitoring	Off	Enabled	Remote monitoring

#### Easy installation using UPnP (Universal Plug and Play)

When connecting the camera with a UPnP enabled router, the camera automatically configures its network settings.

\* Some UPnP enabled routers cannot configure the camera automatically. In this case, the router needs to be configured manually. Ask the router manufacturer how to configure it. See Panasonic Network Camera support website at <http://panasonic.co.jp/pcc/products/en/netwcam/> for more information.

#### Supporting Viewnetcam.com service

Viewnetcam.com service allows you to access the camera over the Internet with your favorite domain name (e.g. bob.viewnetcam.com) instead of a global IP address.

\* Viewnetcam.com service is the service for Panasonic Network Camera. See Viewnetcam.com website (<http://www.viewnetcam.com>) for more information.

#### Multi-Language Display

Top page, Single Camera and Multi-Camera page can be displayed in English, French, German, Italian, Spanish, Russian, Simplified Chinese or Japanese. If you select English, Japanese or French, all pages can be changed. But if you select other language, the Setup, Maintenance and Support pages are displayed only in English.

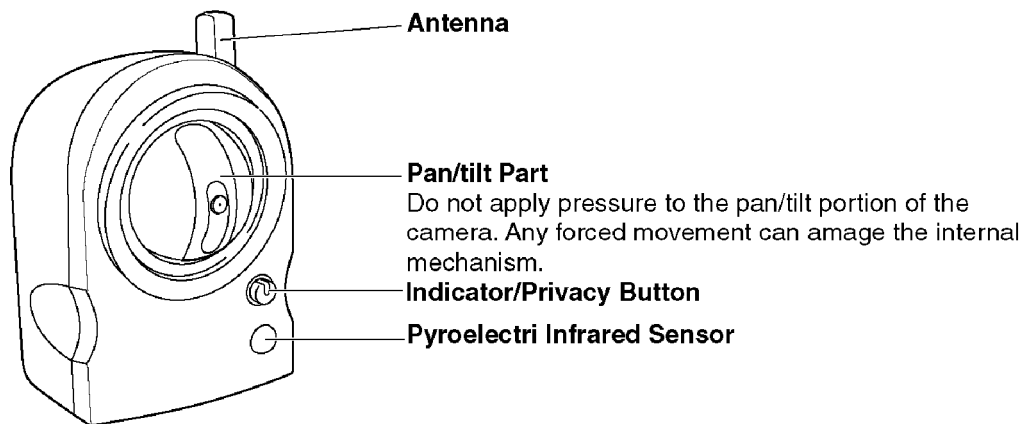

\*1 The sensor uses pyroelectric effect. Due to the effects of environment temperature, direct sunlight or air conditioner, it may detect the temperature differences by mistake, or the detection range may be shortened.

\*2 It may take some time to transfer images depending on the network condition.

\*3 1 lx is the brightness about 2.5 m (8.2 feet) away from auxiliary fluorescent light. Color night view mode slows down the frame rate, and images may blur when viewing a moving object or using the pan/tilt operation.

## 6. PARTS LOCATIONS

### 6.1. FRONT VIEW

### Privacy Button

To temporarily deactivate the camera, press the privacy button. Once pressed, the button changes from green to red. The video will be temporarily turned off, camera features become unresponsive and the viewed image turns to a gray screen. To return to normal operation, press the privacy button again. It should turn green within a few seconds. To restore video, click [Refresh] on the web browser. Privacy mode can also be controlled from mobile phones or PCs.

### Indicator Display

Power on	Not on the LAN	Orange → Orange blinking
	On the LAN	Orange → Orange and green blinking → Green
Normal Operation *1		Green
Automatic Setup	Setting	Green blinking
	Finished setting	Green
Using DHCP	Getting IP address *2	Orange blinking → Green blinking
	Got IP address	Green
Updating Firmware		Orange blinking
Pressing FACTORY DEFAULT RESET button		Orange blinking → Turning off (The camera restarts about 1 minute later.)
UPnP Failure *3		Orange blinking (About a 2-second interval)
In Privacy Mode		Red
Internal Failure		Red blinking

\*1) The indicator turns orange if the camera is not connected to the LAN.

\*2) The indicator blinks orange if the camera is not connected to the LAN.

\*3) When the sensor is active, the interval between blinks may increase.

## 6.2. BOTTOM VIEW

## 6.3. REAR VIEW

### Note:

If the ceiling is made of wood, the camera can be installed on the ceiling. See Panasonic Network Camera support website at <http://panasonic.co.jp/pcc/products/en/netwkcaml/> for details.

# 7. CONNECTING YOUR NETWORK CAMERA

## 7.1. PREPARATION

Prepare the following before connecting the Network Camera.

- Set up software (Setup CD-ROM)
- PC to fulfill the system requirements.
- Ethernet Router or Wireless Router for LAN Connection.
- Ethernet cable (two pieces of Category 5 straight cable).

#### SYSTEM REQUIREMENTS

Your PC (Personal Computer) and network must meet the following technical specifications for the camera to work properly.

Item	Description
Operating System	Microsoft ® Windows ® XP Microsoft ® Windows ® 2000 Microsoft ® Windows ® Me Microsoft ® Windows ® 98SE
CPU	Pentium ® III (500 MHz or greater is recommended.)
Protocol	TCP/IP protocol (HTTP, TCP, UDP, IP, DNS, ARP, ICMP)
Interface	10/100 Mbps network card installed
Web Browser	Internet Explorer 6.0 or later (Not included on the Setup CD-ROM)

#### Note:

See Panasonic Network Camera support website at <http://panasonic.co.jp/pcc/products/en/netwcam/> for the latest information about web browser.

#### Abbreviations

- UPnP™ is the abbreviation for Universal Plug and Play.

## 7.2. CONNECT THE CAMERA TO YOUR ROUTER

Connect the camera to your router with an Ethernet® cable to set up the camera.

- Before you begin the installation, the UPnP feature in your router needs to be enabled. Usually, the default setting disables this feature. For more info, please visit, [http://panasonic.co.jp/pcc/products/en/netwcam/technic/rtr\\_setup/](http://panasonic.co.jp/pcc/products/en/netwcam/technic/rtr_setup/) or contact your router's manufacturer.
- These instructions assume your PC is already connected to the Internet and your home network includes a router that is UPnP

(Universal Plug and Play) compliant.

- The camera will be connected to your router using a "straight" Cat5 network cable (customer-provided).

1. Confirm that the switch on the bottom of the camera is set to wired.

2. Connect the Ethernet cable to your router.

3. Connect the Ethernet cable to the camera.

### 7.3. TURN THE CAMERA ON

Inserting the AC adaptor to the outlet powers up the camera.

#### 1. Connect the power cord from the AC adaptor to the DC In jack.

#### 2. Connect the AC plug of the AC cord to the power outlet.

- When you operate the camera, the power outlet should be near the camera and easily accessible.
- Use only specified Panasonic AC adaptor PQLV202 (Order No.PQLV202Y).

#### 3. After the lens moves (pan/tilt operation), confirm that the indicator lights green after a minute.

- If the indicator does not light green, see page 15 and 16 of the Installation/Troubleshooting.
- A noise can be heard during pan/tilt operation. This is normal.

## 7.4. SETUP THE CAMERA

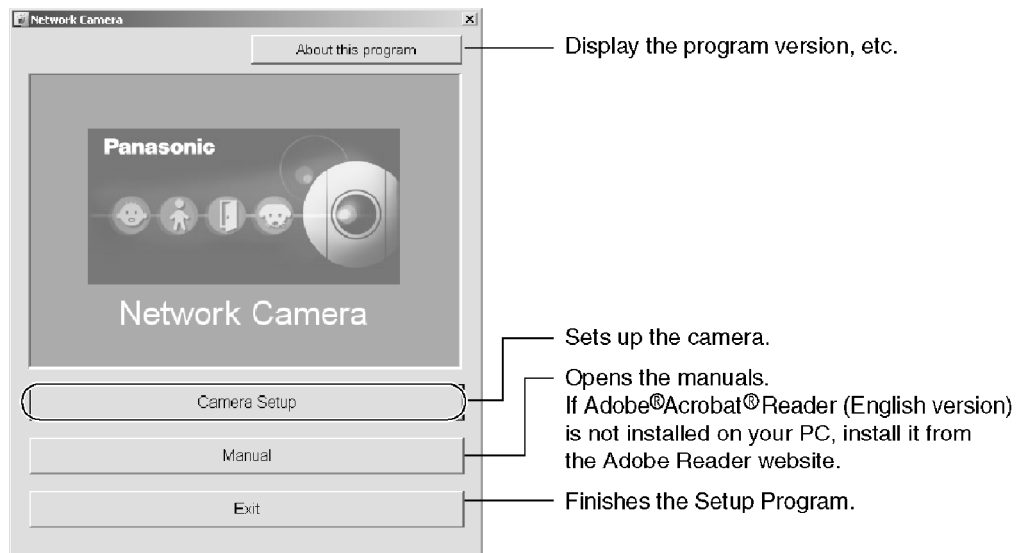

### Important

- To avoid any possible problems, temporarily disable any firewall or antivirus software.
- This procedure explains installation of the camera on the same network that your PC is part of.
- Before proceeding, close your web browser.

1. Insert the Setup CD-ROM into the CD-ROM drive of the PC.

(If the Network Camera Setup window is not displayed automatically, double-click "Setup.exe" file on the Setup CD-ROM.)

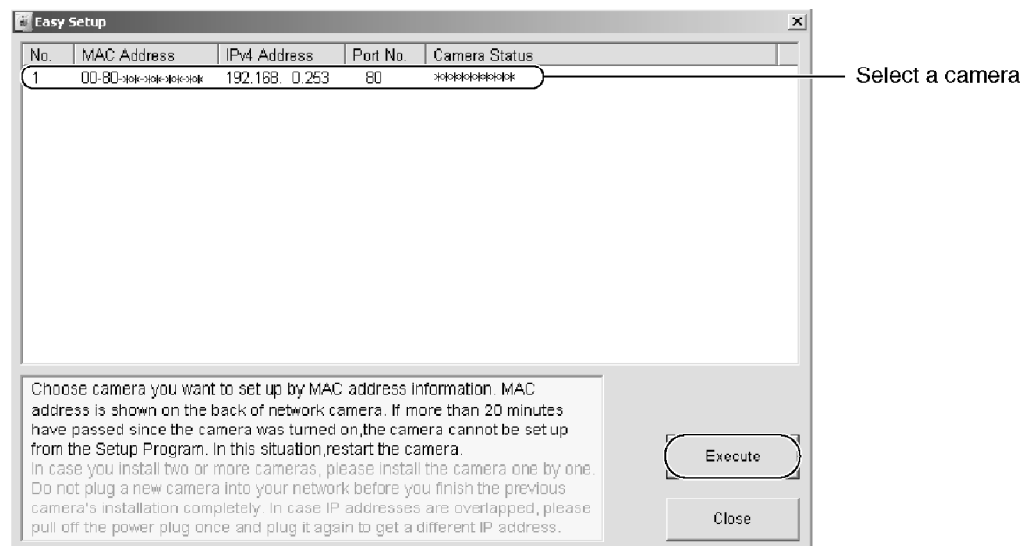

2. Click [Camera Setup].

3. Select the camera to set up and click [Execute].

- This program searches for the cameras that are connected to the

router and displays the MAC Addresses, IP addresses and Port Numbers.

- When searching for multiple cameras, the cameras can be identified with the MAC Addresses labeled near the Ethernet (LAN) port of the cameras.

**Note:**

- If more than 20 minutes have passed since the camera was turned on, the camera cannot be set up from the Setup Program. In this situation, restart the camera.
- The Setup Program may not list any cameras due to your firewall or antivirus soft-ware settings on your PC. If you cannot disable your firewall or antivirus software, you can set up the camera entering the camera MAC address.

4. Click [Automatic setup (Local Access Only)].

Camera No. 1 : MAC Address 00-80-\*\*-\*\*-\*\*-\*\*

Automatic Setup (Local Access Only)

Automatic Setup (Internet Access)

Manual Setup

Open the camera's web page

Close

- For the first time installation or after pressing the Factory Default Reset button, only [Automatic Setup (Local Access Only)] can be selected. To set up the camera with Static or DHCP settings, after performing the [Automatic Setup (Local Access Only)], run the Setup Program again and select [Manual Setup].

5. Enter the user name and password, and click [Save].

**Administrator Authentication**

New User Name (6 to 15 characters)

New Password (6 to 15 characters)

Retype new password

Note : (1) You'll be asked for User name and password to open camera's web page.  
Please keep your User Name and Password securely  
(2) Alphabet and number only. [Space], ['], ["], [ & ], [ < ], [ > ] are not allowed.  
(3) The capital or small letter is distinguished.  
(4) User Name and Password must be different from each other.  
(5) It is strongly recommended to change password regularly for security.

Save

6. The Enter Network Password window is displayed. Enter the user name and password that were set, and click [OK].

7. To set the Wireless Configuration, check [Enable] and click [Next>].

- When [Disable] was selected, skip to step 9.

A screenshot of a 'Wireless Configuration' dialog box. The title bar is dark gray with the text 'Wireless Configuration' in white. Below the title bar, there are two radio button options. The first option is 'It sets.' with a selected radio button. The second option is 'It does not set.' with an unselected radio button. At the bottom of the dialog box, there are two buttons: '<Back' and 'Next>'. The dialog box has a light gray background and a thin border.

Wireless Configuration

☒ It sets.

☐ It does not set.

<Back      Next>

- The Wireless Configuration can also be set at [wireless] in the Setup Page.

8. Set the Wireless Configuration.

The screenshot shows a 'Wireless Configuration' window. It has three main sections: 'Wireless Configuration', 'Encryption', and 'WEPKey'. The 'Wireless Configuration' section includes an 'SSID' field with the value 'BLC30Axxxx' and a 'Communication mode' section with three radio buttons: '802.11b', '802.11b/g' (which is selected), and '802.11g exclusive'. The 'Encryption' section has a 'Cipher' dropdown menu set to 'No encryption'. Below this are four 'WEPKey' fields, each with a radio button and a dropdown menu set to 'ASCII 13 characters 128 bit'. At the bottom are '<Back' and 'Next>' buttons.

**1. Set the SSID.**

Set the name of the wireless network.

**2. Select the Communication mode.**

They are IEEE Communication modes. Select the same Communication mode as that of the router to which the camera is connected.

**802.11b (IEEE802.11b)** : Only 802.11b wireless router can be connected.

**802.11b/g (IEEE802.11g)** : Either 802.11b or 802.11g router can be connected.

**802.11g exclusive (IEEE802.11g)** : Only 802.11g router can be connected.

**3. Select encrypting or not encrypting.**

Selecting WEP can encrypt data within the wireless LAN.

**WEP:** Encrypting (setting WEP) makes it difficult for unauthorized users to read data within the wireless LAN, even if they can receive it. To encrypt data, set the same encryption key to every terminal within the wireless LAN. There are 3 kinds of encryption key: 64 bit, 128 bit and 152 bit. Security level of encryption increases in order of length as follows: 64 bit, 128 bit and 152 bit.

**No encryption:** select when not using encryption.

**4. Set the WEPKey1~4.**

Selecting [WEP] at Cipher enables you to set WEPKey1-4. One or all of the four keys can be set. Check the same key number as set to the router, and set the same key as at the router.

: The entered WEPKey will be displayed as " "s regardless of the key type selected.

**<Example>**

**HEX, 10 characters 64 bit** : 012345abcd

**HEX, 26 characters 128 bit** : 0123456789abcdef012345abcd

**HEX, 32 characters 152 bit** : 0123456789abcdef0123456789abcdef

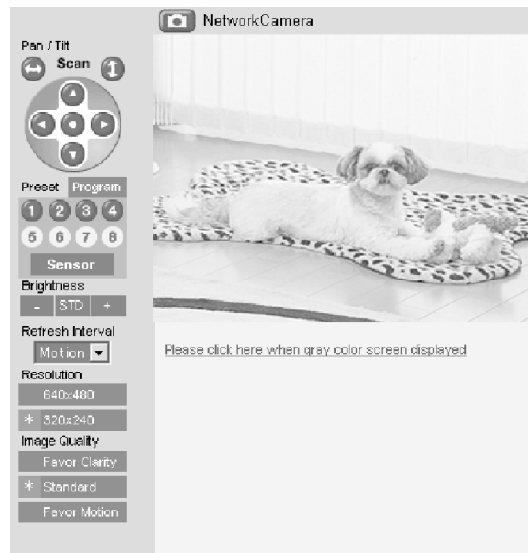

**ASCII 5 characters 64 bit** : 012yz

**ASCII 13 characters 128 bit**: 0123456uvwxyz

**ASCII 16 characters 152 bit**: 0123456789uvwxyz

**9. When the Single Camera page is displayed, the setup is completed.**

**- If Security Warning window is displayed to install ActiveX® Controls, click [Yes].**

**- The image is a simulated screen image.**

**Note:**

**Check [Every visit to the page] for "Temporary Internet files" on your web browser. If it is not checked, the camera may display old images.**

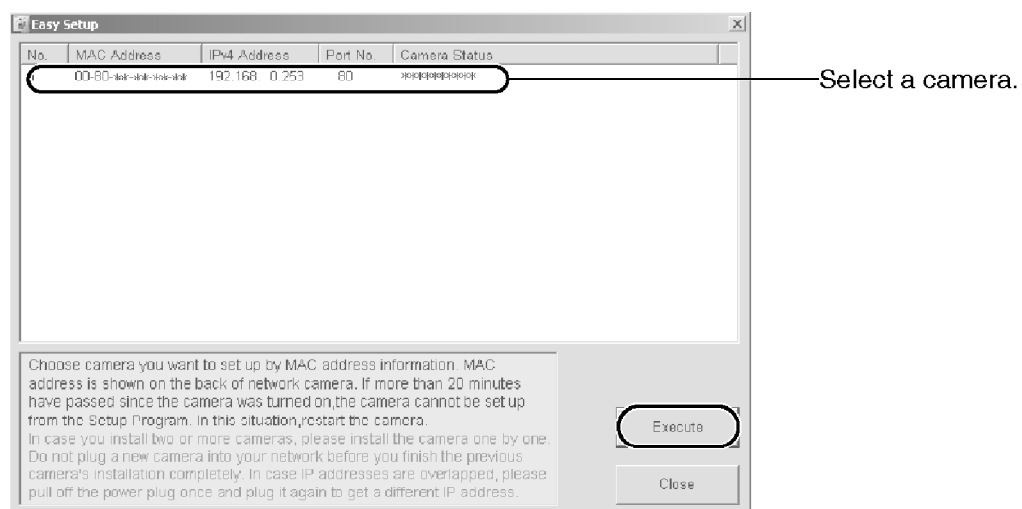

**9. Click [Next] to set up the Internet access to the camera and go to step on the next page..**

- Click [Cancel] and go to 7.6. **CONFIRMING THE WIRELESS LANSETUP** , if you mount the camera.

## 7.5. TO SET UP INTERNET ACCESS TO THE CAMERA

1. Select the camera on the camera list to set up the Internet access and click [Execute].
- This program searches for the cameras that are connected to the router and displays the MAC Addresses, IP addresses and Port Numbers.

- When searching for multiple cameras, the cameras can be

identified with the MAC Addresses labeled near the Ethernet (LAN) port of the cameras.

**Note:**

If more than 20 minutes have passed since the camera was turned on, the camera cannot be set up from the Setup Program. In this situation, restart the camera.

2. Click [Automatic Setup (Internet Access)].

- For the first time installation or after pressing the Factory Default Reset button, only [Automatic Setup (Local Access Only)] can be selected. To set up the camera with Static or DHCP settings, after performing the [Automatic Setup (Local Access Only)], run the Setup Program again and select [Manual Setup].

3. The Enter Network Password window is displayed. Enter the username and password that were set, and click [OK].

**Enter Network Password**

Please type your user name and password.

Site: \*\*\*\*.\*\*\*.\*\*\*.\*\*\*

Realm: \*\*\*\*\*

User Name:

Password:

☐ Save this password in your password list

OK Cancel

4. To enable access over the Internet, check [Enable]. Not to enable access over the Internet, check [Disable]. And click [Next>].

**Allow Access from the Internet**

☒ Enable

☐ Disable

Next>

- If you select [Disable], skip to step 8.

#### Registration with the "Viewnetcam.com FREE DDNS service"

By registering with the Viewnetcam.com FREE DDNS service, you can create a personalized web address at which your camera's live video can always be found on the Internet. For detailed information, access "<http://www.viewnetcam.com>".

5. To register with the "Viewnetcam.com FREE DDNS service", check [Register with Viewnetcam.com] and click [Next>].

**Viewnetcam.com Registration**

☒ Register with Viewnetcam.com  
☐ Do not register with Viewnetcam.com

- When [Do not register with Viewnetcam.com] was selected at step 5, skip to step 8.

6. The Enter Network Password window is displayed. Enter the user name and password that were set, and click [OK].

7. After a while, the "Viewnetcam.com FREE DDNS service" website is displayed. Follow the displayed instructions for registration.

- If the message "Failed to configure the router's Port Forwarding by UPnP" is displayed, your router may not support UPnP or UPnP is not enabled. Enable your router's UPnP or set Port Forwarding manually following the router's manual and try Automatic Setup again. For more information about setting up a router, refer to the Panasonic Network Camera support web-site at [http://panasonic.co.jp/pcc/products/en/netwkcam/technic/rtr\\_setup](http://panasonic.co.jp/pcc/products/en/netwkcam/technic/rtr_setup).
- If the message "Failed to register with Viewnetcam.com." is displayed, con-firm that the router is connected to the Internet.

8. When "Setup complete" is displayed, click [To Single Camera page].

- When [Enable] was selected at step 4.

**Setup completed**

Use the address below to access the camera

Local Network Access: [http:// \\*\\*\\*\\*\\*](http://*****)

Access via Internet: [http:// \\*\\*\\*\\*\\*](http://*****)

The address above will be shown on Status page in the Maintenance section.

- When [Disable] was selected at step 4.

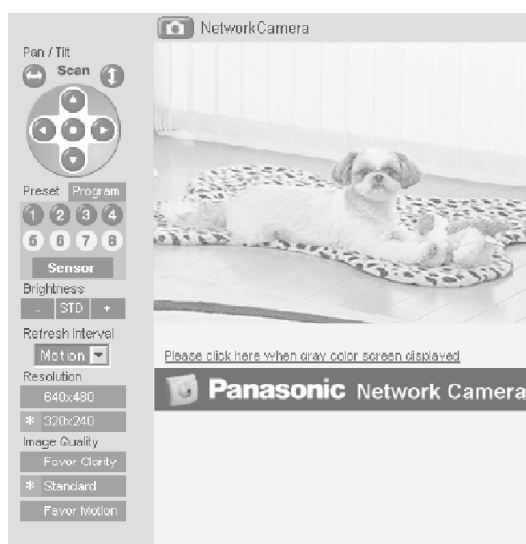

**Note:**

- The port number must be specified at the end of camera URL.  
For example  
Using port 80: http://(Cameraname).viewnetcam.com or http://IP Address  
Using any other port: http://(Cameraname).viewnetcam.com:Port Number or http://IP Address:Port Number
- The URL for the local network access may be different from the one set up on the previous page.

9. When the Single Camera page is displayed, the setup is completed.

- If **Security Warning** window is displayed to install ActiveX Controls, click [Yes].

- The image is a simulated screen image.

**Note:**

Check [Every visit to the page] for "Temporary Internet files" on your web browser. If it is not checked, the camera may display old images.

## 7.6. CONFIRMING THE WIRELESS LANSETUP

After setting each item for the wireless LAN, confirm that the camera works correctly.

1. Unplug the Ethernet cable and turn off the power (disconnect the AC plug).
2. Set the switch on the bottom of the camera to wireless.
3. Turn on the power by connecting the AC plug to the power outlet.
  - The camera switches from wired to wireless.
4. Start up the web browser on the PC.
5. Enter "http://IP address (or URL):Port No." in the address field and press [Enter].  
(When port number is 80 (default), you do not need to enter port number.)
  - When the following Top Page is displayed, the wireless LAN setup is successful.

- If the Top Page was not displayed, the settings for the camera are not identical with those for the router. Check the settings by using wired connection.  
If the settings are correct and you use a proxy server, set the web browser not to access the proxy server.  
If the Top Page is not displayed even after trying these methods, contact the retailer.
- It takes about 1 minute for the new settings to be effective.
- It is not possible to access the camera simultaneously by both wired and wireless connection.
- Enter both the MAC addresses for the camera itself and the

camera's wireless module to enable the MAC address filtering feature on the wireless router. The wireless module MAC address is one value higher than the camera MAC address.

## 8. DISASSEMBLY INSTRUCTIONS

### 8.1. HOW TO REMOVE RF BOARD

#### MAC address label caution

When you replace the main board, you must also attach the new MAC address label(included with the main board).Attach the new MAC address label to the unit by placing over the old MAC address label. Make sure the old address cannot be seen.

Throw away the old main board. It cannot be reused.

(If the MACaddress of the old main board is already registered via DDNS and thenused in a different camera, the camera cannot be used with DDNS service.)

1. Remove two Screws (A). And remove the Cabinet Cover.

**2. Remove Screw (B) and Antenna Cable.**

3. Remove Antenna Cable from RF Board, and remove RF Board from Cabinet body.

## 8.2. HOW TO REMOVE MAIN BOARD AND I/O BOARD

- 1-3 are the same as 8.1. **HOW TO REMOVE RF BOARD.**

**4. Remove Screw (B).**

5. Remove two Screws (B).
6. Remove Antenna, Motor Cable and Antenna Cable.
7. Remove Main Flat Cable.

8. Remove two Screws (B).
9. Remove Main Board and I/O Board from Cabinet Body.

10. Remove Sub Flat Cable from Main Board.
11. Remove Main Board from I/O Board.

### 8.3. HOW TO REMOVE SUB BOARD

- 1-3 are the same as [HOW TO REMOVE RF BOARD.](#)
- 4-9 are the same as [HOW TO REMOVE MAIN BOARD AND I/O BOARD.](#)

10. Remove six Screws (B).
11. Remove Eye Block, Pan Motor Unit, Pan Motor Angle, Connect Angle and Washer.

12. Remove two Screws (B).  
13. Remove Sub Flat Cable from Sub Board.

#### 8.4. HOW TO REMOVE LENS UNIT

- 1-3 are the same as 8.1. [HOW TO REMOVE RF BOARD.](#)
- 4-9 are the same as 8.2. [HOW TO REMOVE MAIN BOARD AND I/O BOARD.](#)
- 10, 11 are the same as 8.3. [HOW TO REMOVE SUB BOARD.](#)

12. Remove two Screws (B).  
13. Remove Tilt Motor Unit from Eye Block.  
14. Remove two Spacers, Pan Gear and Pan Motor Unit from Eye Block.

15. Remove two Screws (B).  
16. Remove Eye Left Cover, Eye Center Cover and Eye Right Cover from Eye Block.

## 9. THE CAUTIONS AT THE TIME OF ASSEMBLY

### 9.1. SUB FLAT CABLE INSERTION INSTRUCTION

Put together Lens Button, Button Sheet, and Sub Board in a Cabinet Body, and fix with screws (B).

Insert Sub Flat Cable into connector.

**\* Direction of the lens of the pyroelectric Infrared sensor**

## 9.2. ASSEMBLING INSTRUCTION OF WASHERS

Attach Pan Motor Angle, Connect Angle, and washer to Cabinet Body and fix with screws (B).

### Caution

**After work, check visually that a spring washer is attached without fail.**

\* Device that acts to prevent static electricity  
 Make sure to attach this part to the SUB board  
 and Plate to be sure that it is properly attached.

### 9.3. ASSEMBLING INSTRUCTION OF EYE BLOCK

Insert Spacer into the boss of Eye Right Cover, then fix with Eye Left Cover and Screws (B).

#### Caution

After inserting the Spacer, the Lens Unit should be in the Eye Right Cover position for assembly to prevent the Spacer from dropping out.

#### 9.4. ASSEMBLING INSTRUCTION OF PAN MOTOR UNIT CABLE

1. Insert the Sub Flat Cable into the Main Board, and mount the Main Board and the Sub Board to the Cabinet Body and fixing it with Screws.
2. Insert the Cable of the Pan Motor to the Jig Board and turn on the power to of the board to check the home position operation of the Pan.

If a step-out occurs during the home position operation, it is judged as being NG. After the check, take out the Pan Motor Cable.

### 3. Insert the Cable of the Pan Motor to the Main Board

## 9.5. ASSEMBLING INSTRUCTION OF ANTENNA

Mount the Antenna to the Cabinet Body and fix it with Screws (B).

**Note:**

Before fixing the Antenna to the Cabinet Body, check that the clutch of the Cabinet Body fits to the groove of the Antenna Cap securely.

## 9.6. ASSEMBLING INSTRUCTION OF ANTENNA CABLE

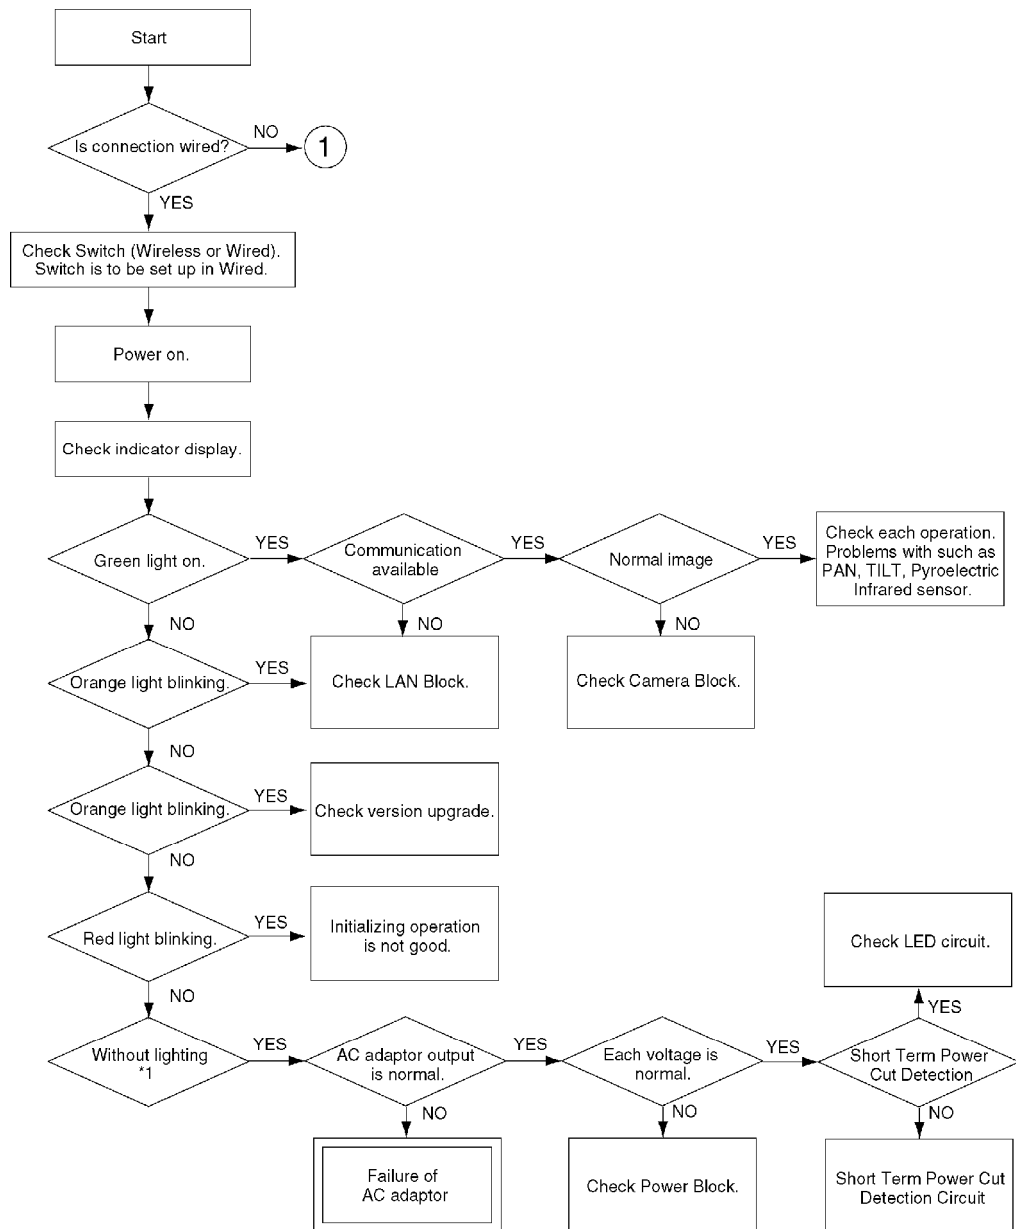

1. Check that the Motor Cable is inserted properly.
2. Check the alignment of the Motor Cable.

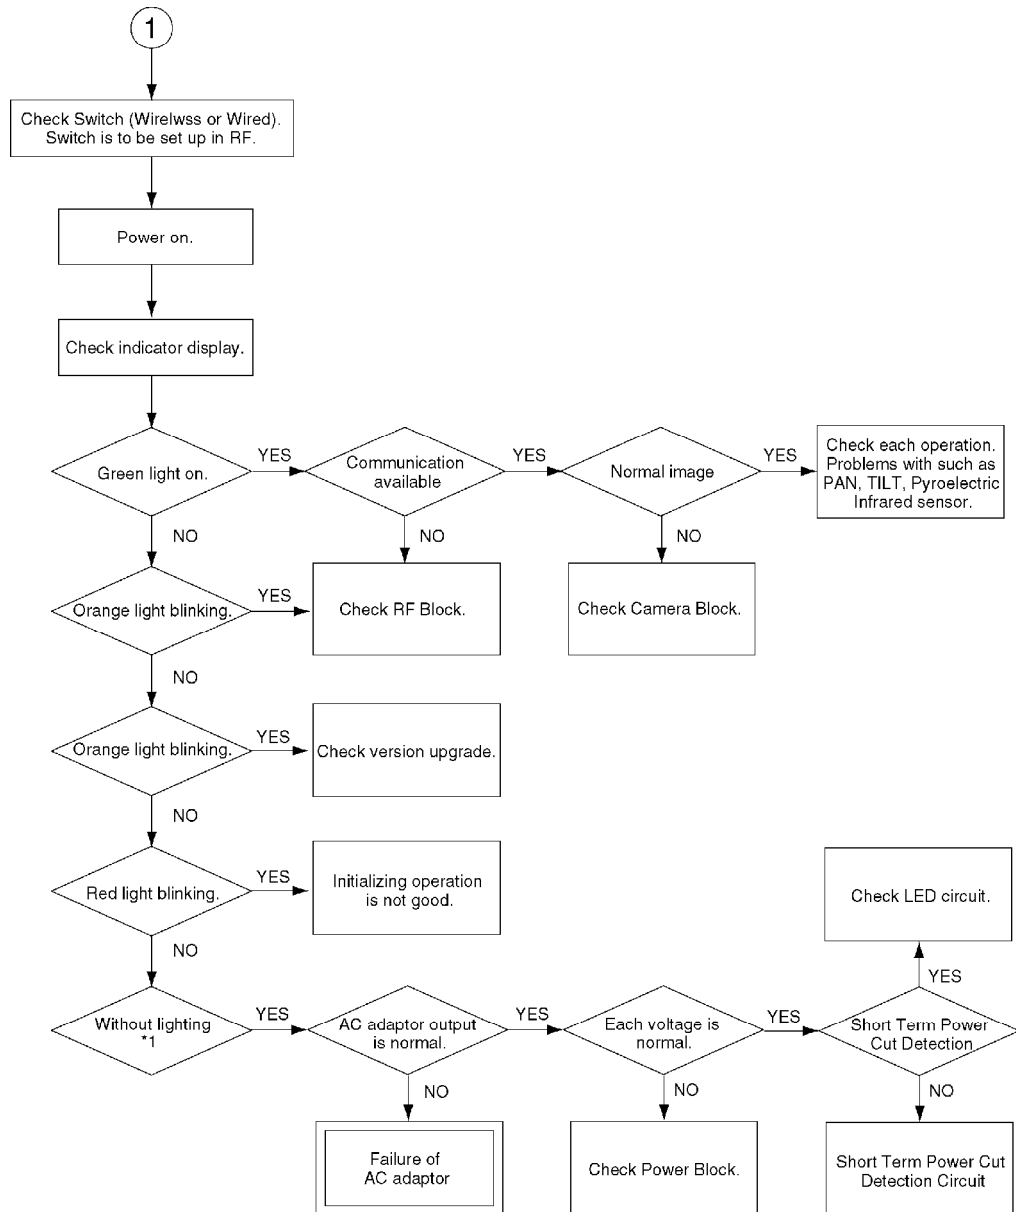

## 10. TROUBLE SHOOTING

### 10.1. STARTING UP OPERATION

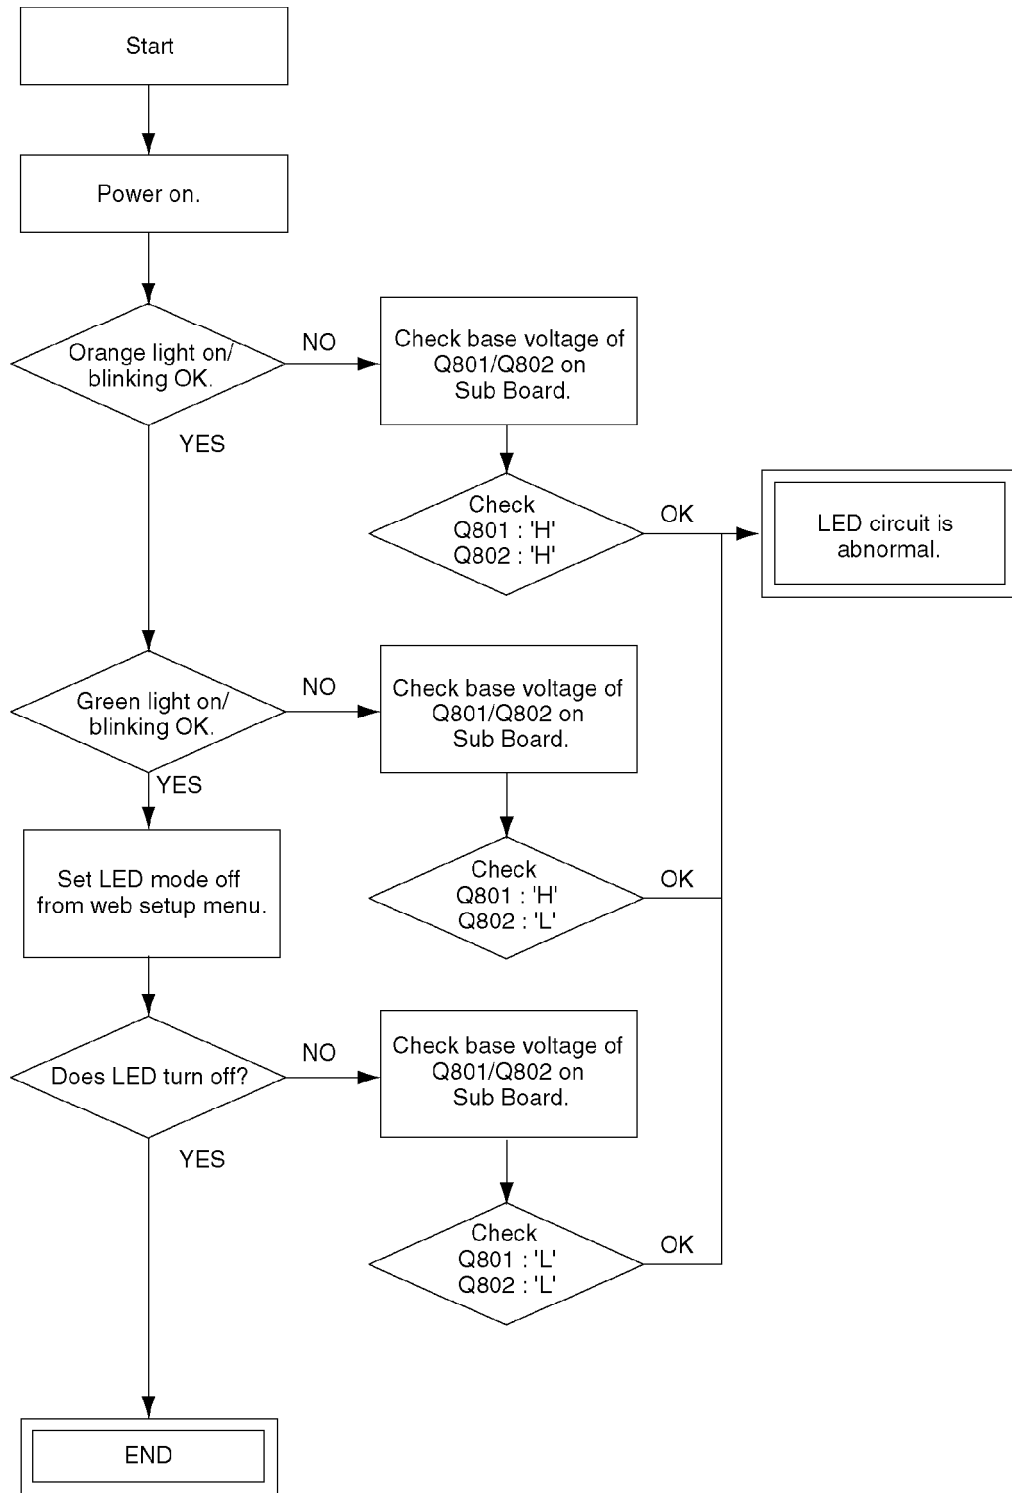

**\*1 It does not turn on, when LED mode is "OFF" on web setup menu.**

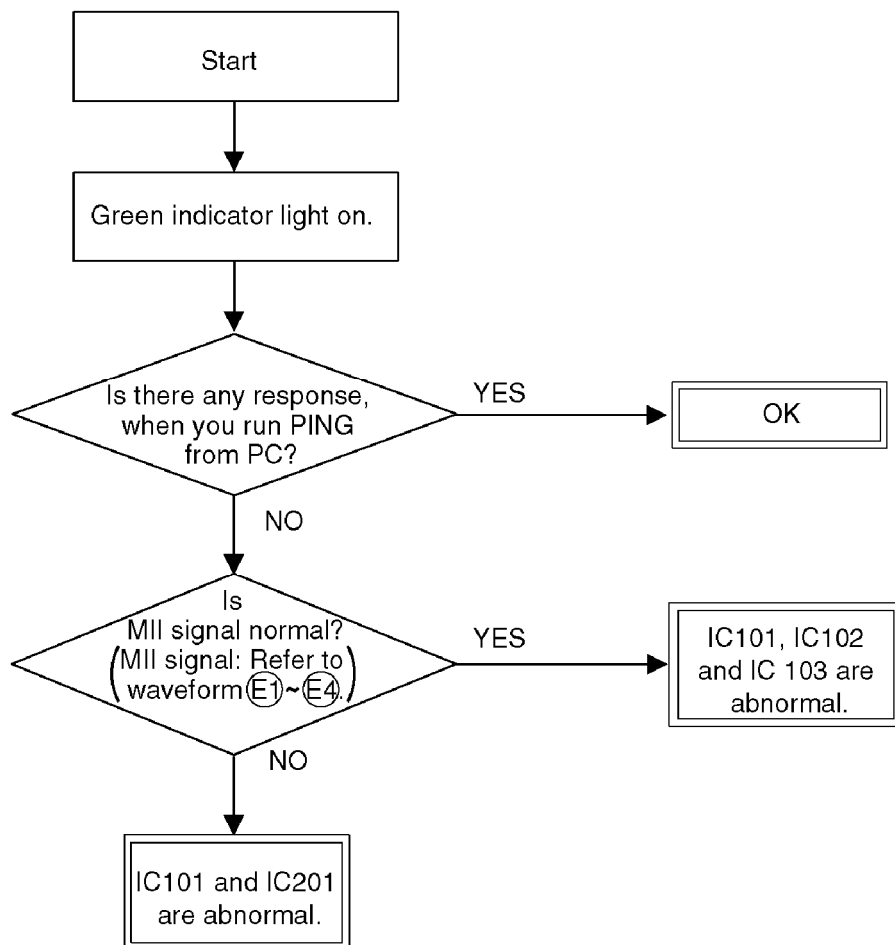

**\*1 It does not turn on, when LED mode is "OFF" on web setup menu.**

## 10.2. LED CIRCUIT CHECK

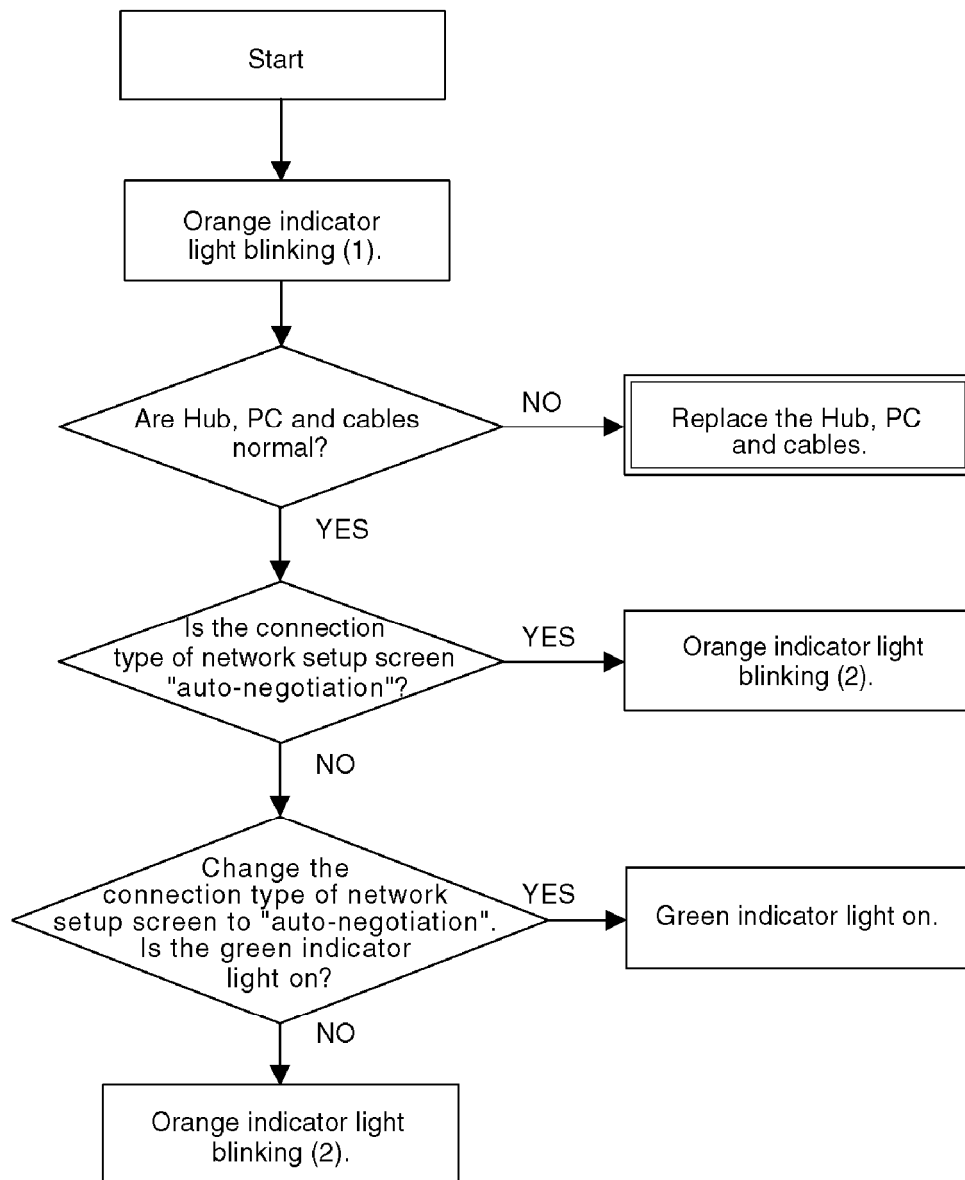

## 10.3. LAN BLOCK CHECK

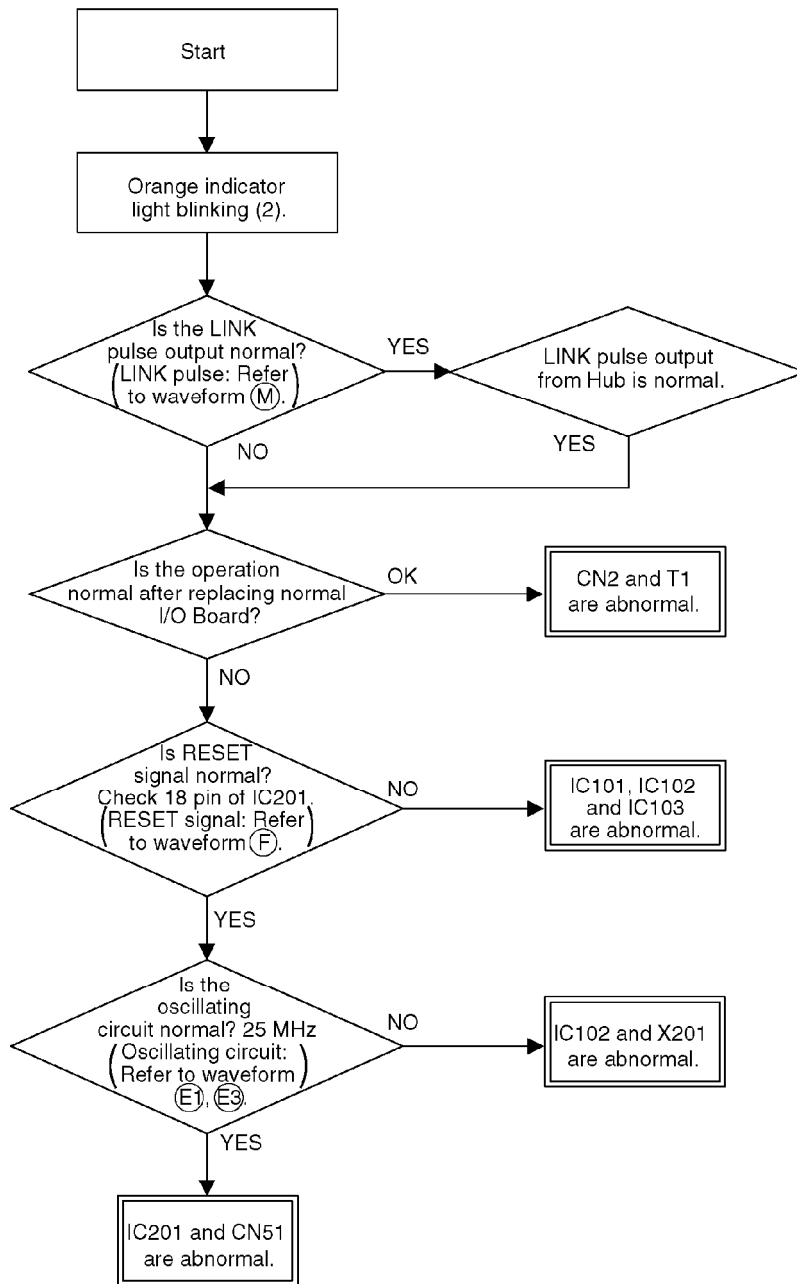

### 10.3.1. Green Light On

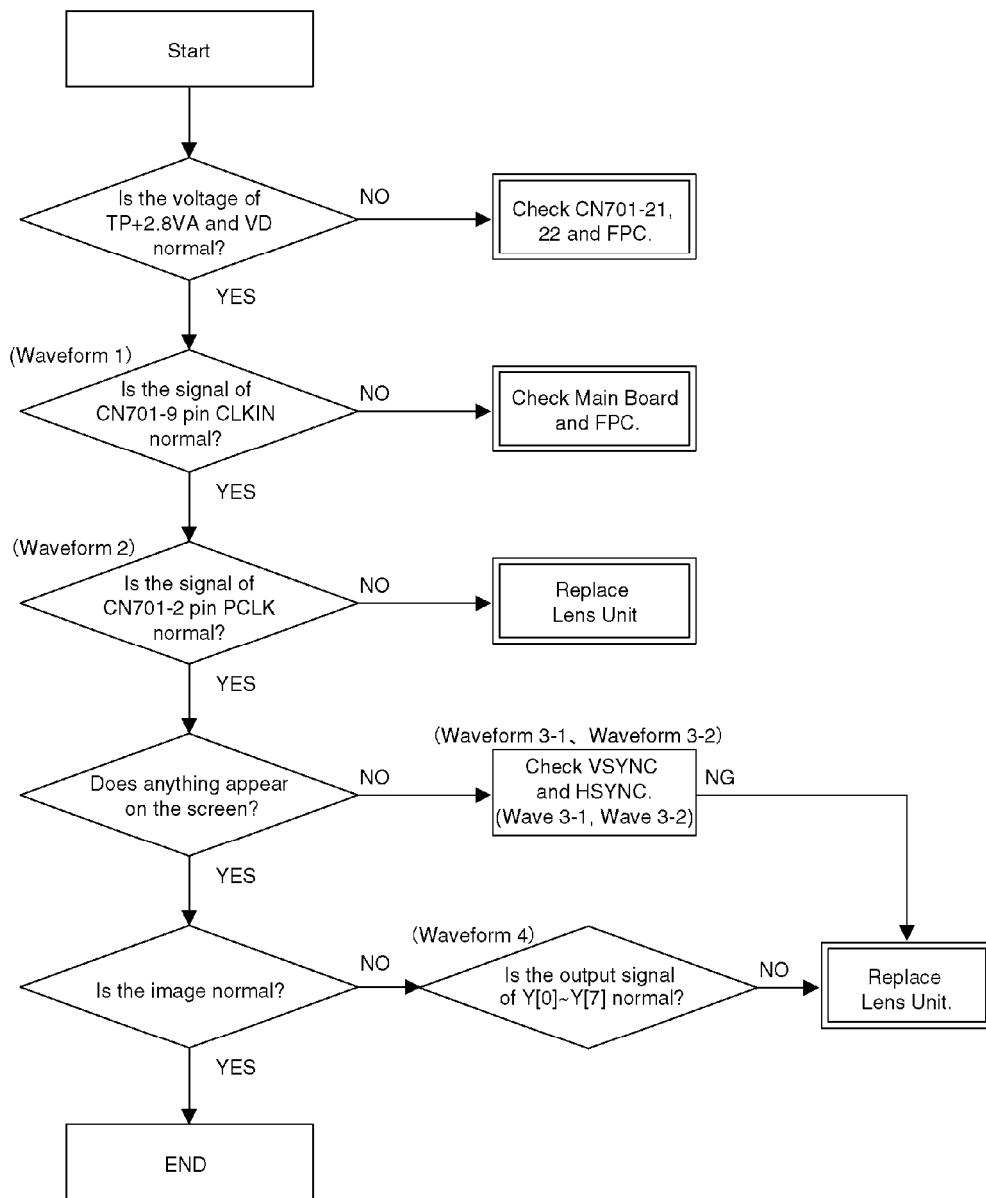

### 10.3.2. Orange Light Blinking (1)

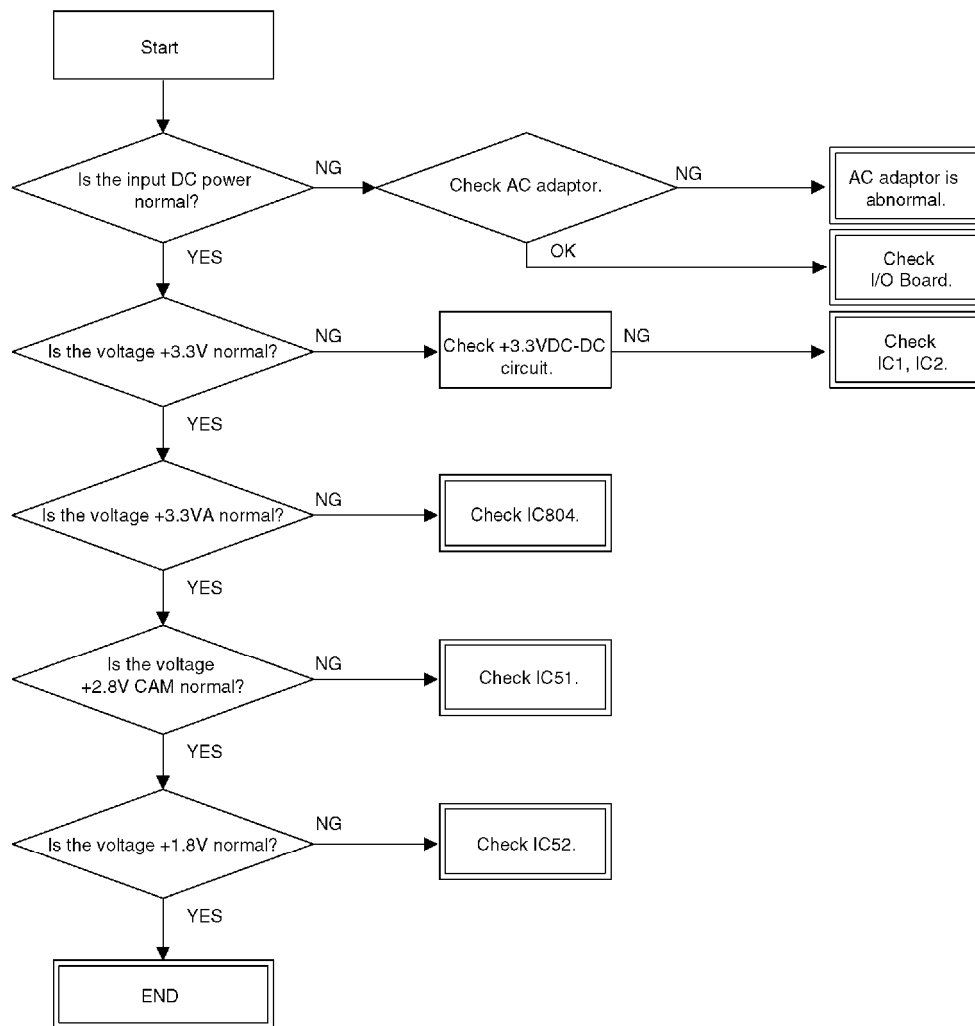

### 10.3.3. Orange Light Blinking (2)

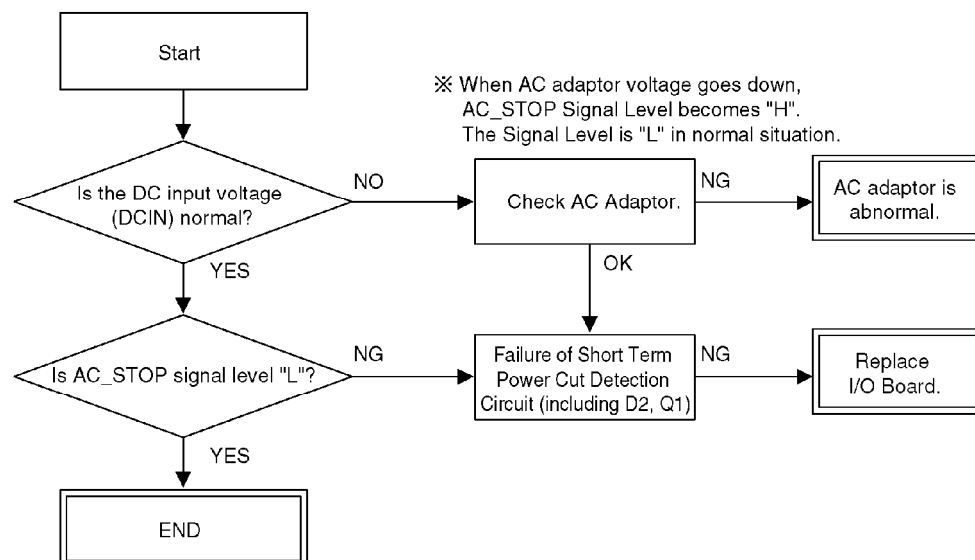

## 10.4. CAMERA BLOCK CHECK

## 10.5. POWER SUPPLY BLOCK CHECK

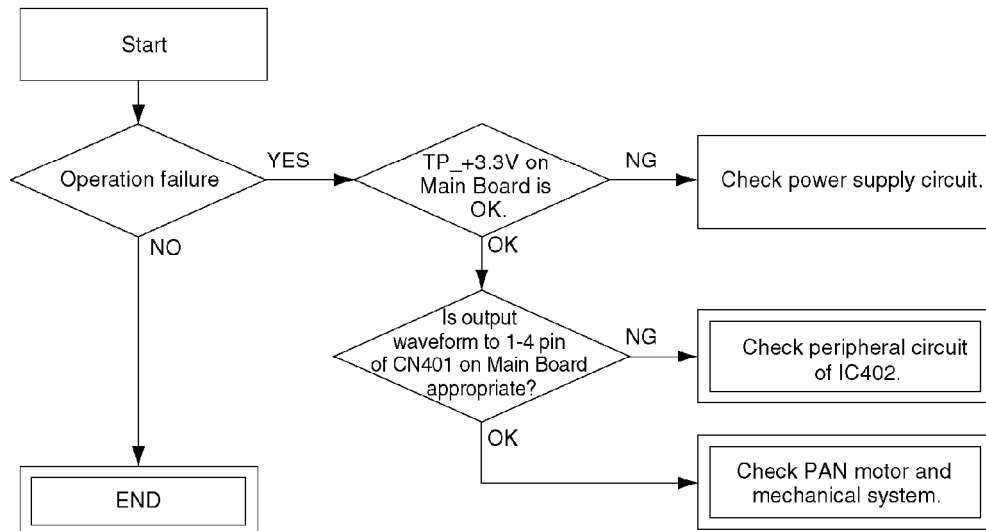

### 10.5.1. Short Term Power Cut Detection Circuit Check

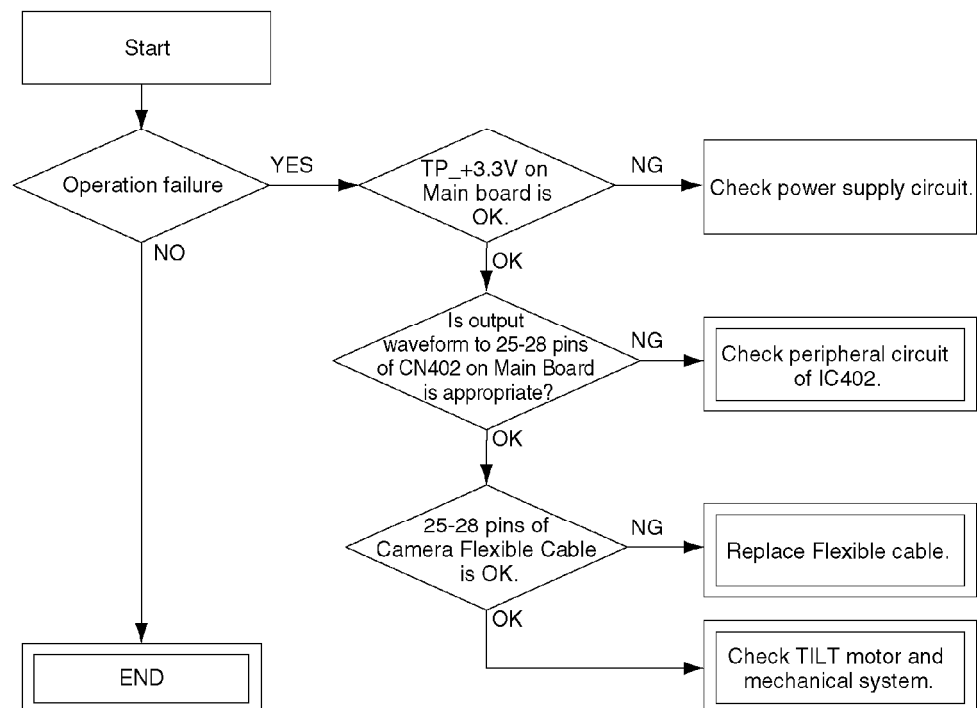

## 10.6. OTHER OPERATION CHECK

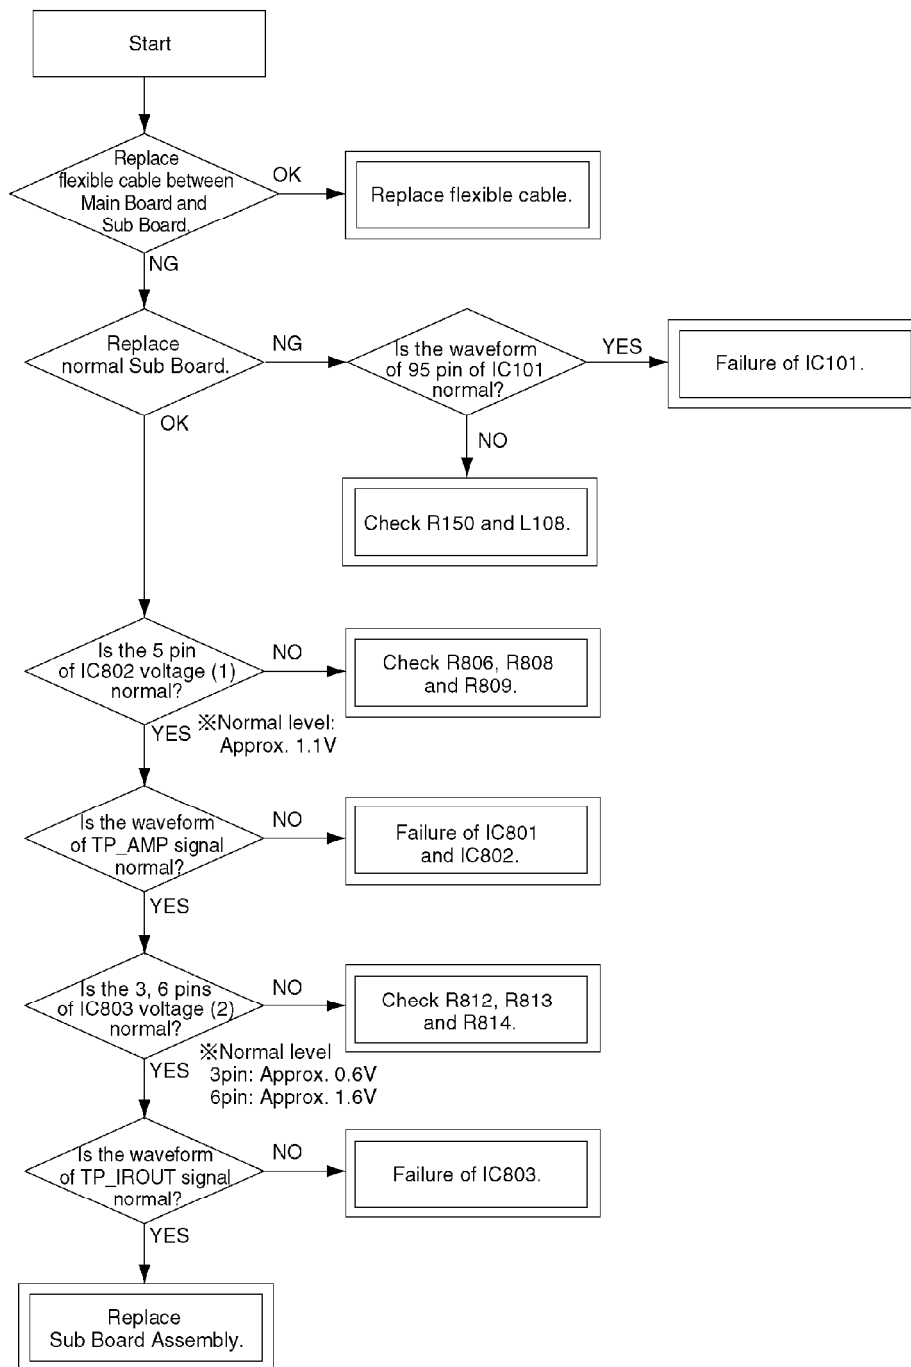

### 10.6.1. PAN Operation Check

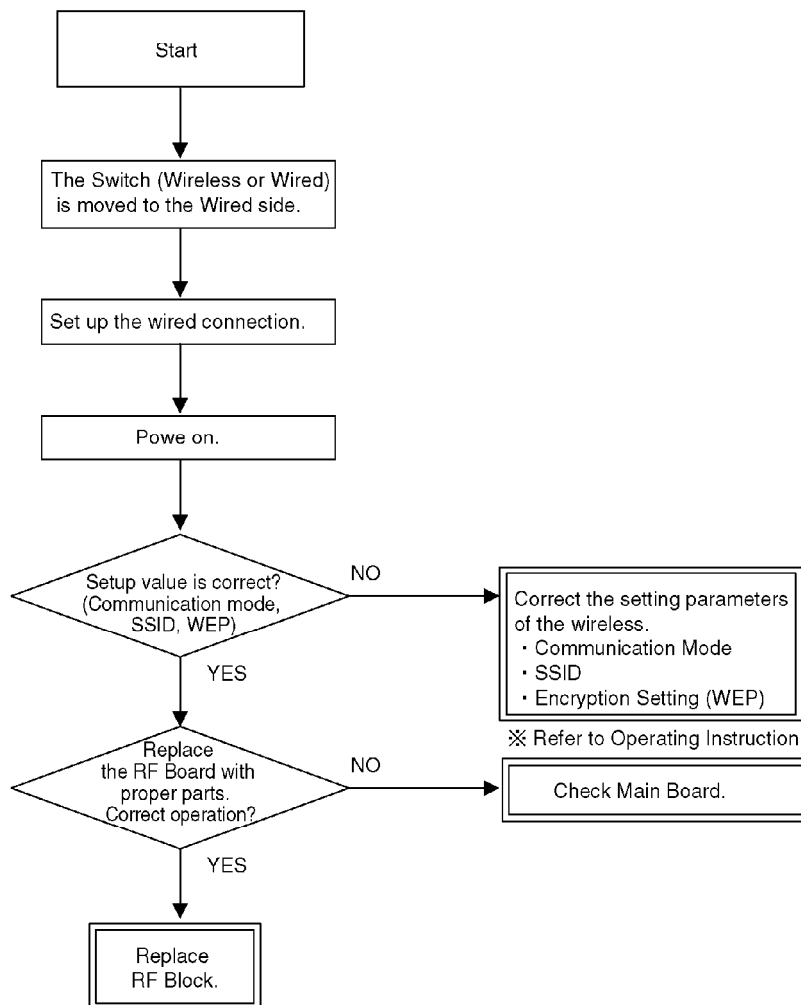

### 10.6.2. TILT Operation Check

## 10.7. PYROELECTRIC INFRARED SENSOR CHECK

## 10.8. RF BLOCK

## 10.9. THE INSPECTION AFTER THE REPAIR

Inspect the following items after the repair.

- Confirm the status (specially MAC Address) refer to **CONFIRMING THE STATUS**.
- PAN/TILT operation
- Pyroelectric Infrared Sensor
- Video quality

## 10.10. CONFIRMING THE STATUS

When turning on the power, CPU makes a check using the self-diagnosis function. Check being able to the access to the device described below.

When the self-diagnosis function of the device described below is NG turning on the power, CPU makes a check using the LED indicator red-blinks.

## 10.11. UPDATE FIRMWARE

### 10.11.1. Firmware Trouble Shouting

The firmware updating is not completed due to power off, network failure or other causes.

Update the firmware again following the next procedures.

## 10.12. HOW TO CHANGE MAC ADDRESS LABEL

### MAC address label caution

When you replace the main board, you must also attach the new MAC address label(included with the main board). Attach the new MAC address label to the unit by placing over the old MAC address label. Make sure the old address cannot be seen.

Throw away the old main board. It cannot be reused.

(If the MACaddress of the old main board is already registered via DDNS and thenused in a different camera, the camera cannot be used with DDNS service.)

1. Pick out new MAC address label from bag and remove new Mac address label.

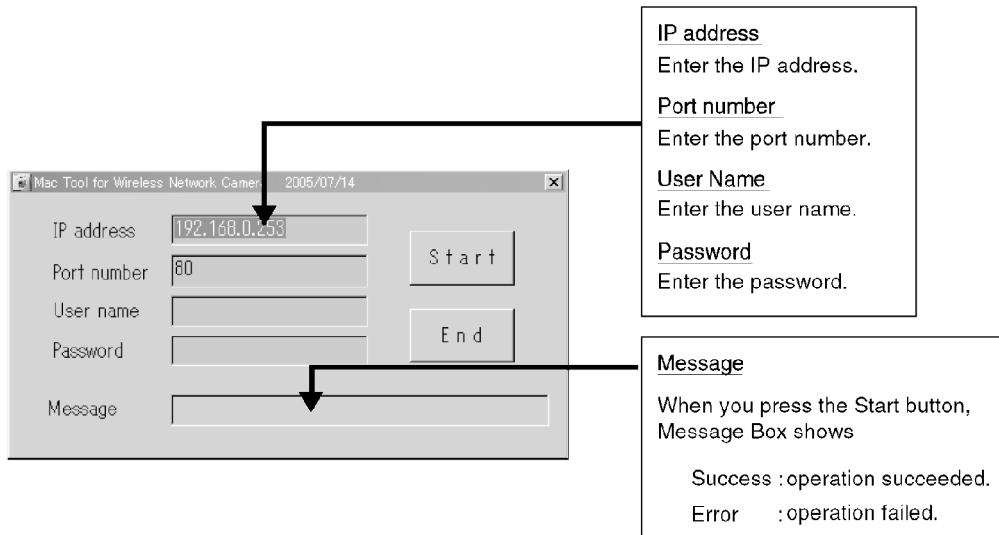

2. Attach the new MAC address label to the unit by placing over the old MAC address label.

#### How to use the MAC tool

Make sure to employ the following MAC tool for replacing the wireless board or the main board.

## How to use the MAC tool

1. Set up wireless communication for the network camera .
  2. Run the MACtool.exe file.
  3. Enter the IP address, the port number, the user name and the password. Press the start button.
  4. If the word 'Success' is displayed in the Message Box, the operation has been successful.
  5. Exit the MAC tool.
- Go back to the check after repair to verify the status again.

\*If the wireless board or the main board is replaced, make sure to execute the MACtool.exe file.

## 11. THE WAY OF THE INITIALIZE

### 11.1. FACTORY DEFAULT RESET BUTTON

The camera has a FACTORY DEFAULT RESET button on the bottom.

Pressing the FACTORY DEFAULT RESET button resets the camera to factory default.  
If you lose your user name and password, use this button to reset the camera.

- Press the FACTORY DEFAULT RESET button for 1 second when

the camera is on.

- See Operating Instructions for default settings.
- The indicator blinks orange, and then turns off for 10 seconds.
- Do not turn off the camera until the indicator lights green.

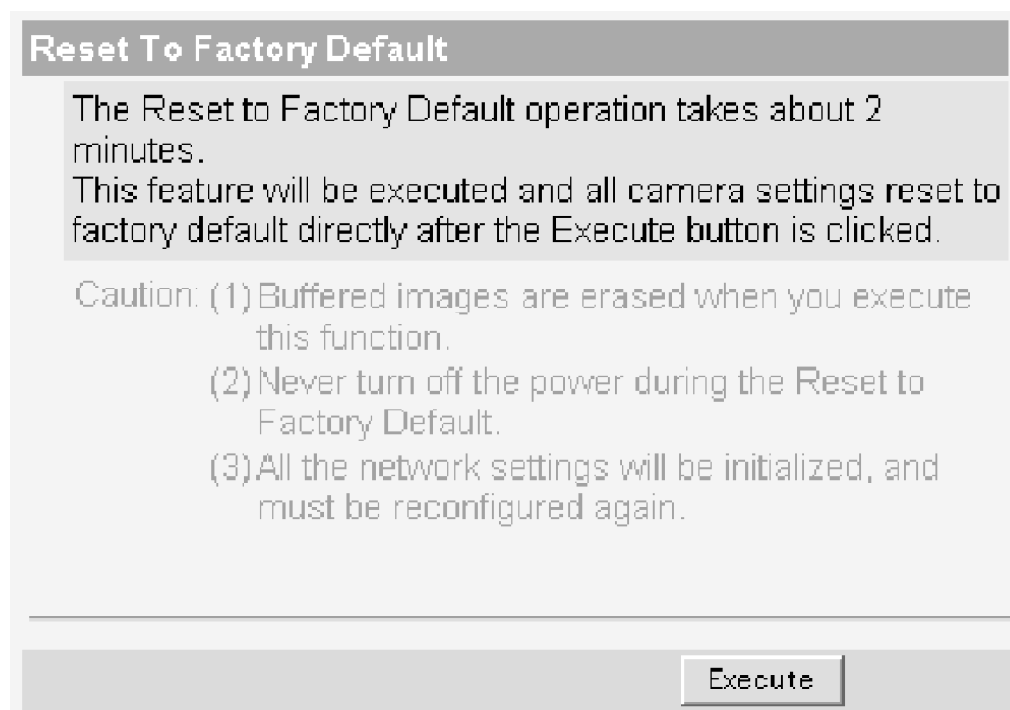

Note:

- The Internal clock will not be reset, but the time format will return to AM/PM mode. Set it again.
- All buffered images are deleted when resetting the camera to factory default.
- The reset operation takes about 1 minute.

## 11.2. RESETTING THE CAMERA TO FACTORY DEFAULT

All camera settings are reset to factory default directly after the Execute button is clicked.

1. Click [Reset to Factory Default] on the Maintenance page.
2. Click [Execute].

- The indicator blinks orange, and turn off for 10 seconds.
- All camera settings (user name, password, IP address, subnet

mask etc.) are reset to factory default.

- If the camera is reset to factory default, the network connection mode changes to [Automatic Setup]. Reconfigure the camera seeing the Getting Started.

Note:

- Internal clock will not be reset, but the time format will return to AM/PM mode. Set it again.
- Please refer to Operating Instructions for default settings.
- Pressing FACTORY DEFAULT RESET button resets the camera to the factory default.
- All buffered images are deleted when resetting the camera to factory default.
- The reset operation takes about 1 minute.
- Do not turn off the camera during the reset operation.

## 12. NETWORK CAMERA BL-C30C BLOCK DIAGRAM

## 13. CIRCUIT DESCRIPTION

### 13.1. MAIN BOARD

#### 13.1.1. CPU Block

CPU (IC101)

Operating Power Supply: 3.3V (for I/O) 1.8V (for Core) 1.8V (for Inside PLL) 2.8V (Camera I/O)

Package: 144 pin QFD

Internal Component: 32bit RISC ARM720T, Hardware JPEG Encoder, Memory Controller, 10/100Base Ethernet MAC, I2C I/F, Serial I/F, SRAM (48KB) and etc are built-in.

Outline of Operation: All system Control and image data from the camera is changed to JPEG data. Then, it is changed to packet and sent out from Ethernet I/F.

32.786 KHz is entered as External Clock and increase at Internal PLL. Then, it operates at 48.955 MHz. Flash Memory (IC102) and SDRAM (IC103) are accessed by CPU Bus.

CMOS sensor (IC701) and Real Time Clock IC (IC104) on the Camera Block are accessed by I2C I/F. Ethernet PHY (IC201) is accessed by MII (Media Independent Interface) I/F.

FLASH MEMORY (IC102)

Operating Power Supply: +3.3V

Package: 48 pin Ball CSP

Capacity: 16Mbit

Access Time: 70ns

Outline of Operation: Stores programs for CPU operation, MAC address and customer setup data. Version up is available from Ethernet I/F.

**SDRAM (IC103)**

**Operating Power Supply: +3.3V**

**Package: 54 pin TSOP**

**Capacity: 64Mbit**

**Outline of Operation: Stores the memory for CPU work and temporary saved images.**

**RESET IC (IC105)**

**Reset voltage: 2.9V**

**Package: 4 pin SOP**

**Outline of Operation: When 3.3V power starts up, it emits about 150ms reset pulse after detecting 2.9V.**

**Clear Setting Button (SW802)**

**Outline of Operation: It is possible to bring back the setting value of a Network Camera to a factory-shipments state, when you push.**

**GPI0**

- Motor (PAN/TILT) Operation**
- Clear Setting SW**
- Privacy Mode SW**
- I2C**
- LED**
- Pyroelectric Infrared Sensor**
- Short Term Power Cut Detection**

Port No.	IC101 PIN No.	Usage	Description
GPIOA0	79	TXD0	Serial(Not in use.)
GPIOA1	80	RXD0	Serial(Not in use.)
GPIOA2	81	PAN Motor 1	PAN Motor Control
GPIOA3	82	PAN Motor 2	PAN Motor Control
GPIOA4	83	PAN Motor 3	PAN Motor Control
GPIOA5	84	PAN Motor 4	PAN Motor Control

GPIOF1	46	MII I/F (MII_COL)	For IC201(PHY) Connection
GPIOF2	47	MII I/F (MII_TXD3)	For IC201(PHY) Connection
GPIOF3	48	MII I/F (MII_TXD2)	For IC201(PHY) Connection
GPIOF4	49	MII I/F (MII_TXD1)	For IC201(PHY) Connection
GPIOF5	50	MII I/F (MII_TXD0)	For IC201(PHY) Connection
GPIOF6	52	MII I/F (MII_TXEN)	For IC201(PHY) Connection
GPIOF7	53	MII I/F (MII_TXCLK)	For IC201(PHY) Connection
GPIOG0	54	MII I/F (MII_RXER)	
GPIOG1	57	MII I/F (MII_RXCLK)	For IC201(PHY) Connection
GPIOG2	58	MII I/F (MII_RXDV)	For IC201(PHY) Connection
GPIOG3	59	MII I/F (MII_RXD0)	For IC201(PHY) Connection
GPIOG4	60	MII I/F (MII_RXD1)	For IC201(PHY) Connection
GPIOG5	62	MII I/F (MII_RXD2)	For IC201(PHY) Connection
GPIOG6	63	MII I/F (MII_RXD3)	For IC201(PHY) Connection
GPIOG7	64	MII I/F (MII_MDC)	For IC201(PHY) Connection
GPIOH0	65	MII I/F (MII_MDIO)	For IC201(PHY) Connection

### 13.1.2. LAN Block

Consists of IC101 (CPU), IC201 (ETHER-PHY), T1 (Trans) and CN2 (RJ45).

T1 (Trans) insulates sets and Ethernet.

IC101 (CPU) and IC201 (ETHER-PHY) are connected by a signal called MII Bus which it makes it possible to transmit/receive Ethernet data.

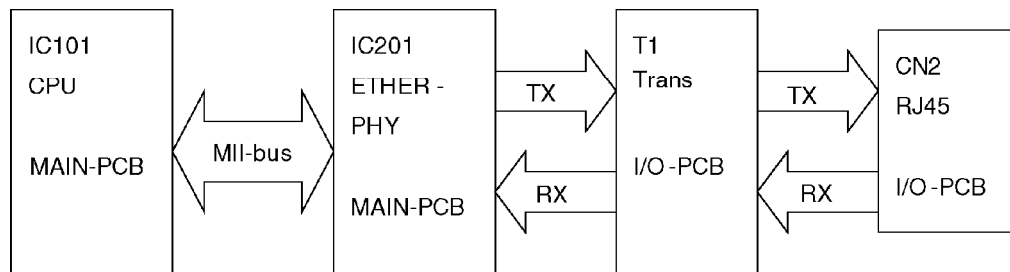

IC201 has Auto Negotiation Function which changes 100BASE-T or 10BASE-TX automatically.

#### Transmitting Operation

Electric signal from IC101 is changed to Ethernet data on IC201 and it is sent through T1 from CN2.

#### Receiving Operation

Ethernet data from CN2 is change to electrical signal on IC201 and it is received by IC101.

### 13.1.3. Camera Block

#### <Basic Circuit Operation>

This CMOS image sensor which consolidates sensor section and image process DSP by the 0.35umCMOS process consists of one chip. Each pixel which consists of four transistors has a micro lens for increased sensibility. It changes optical energy to analogue voltage. After that, analogue pixel voltage is converted into digital using the 10 bit AD Converter (ADC). At that time, Correlated Double Sampling (CDS) dramatically decreases Formulaic Pattern Noise (FPN). Analogue pixel voltage data which is converted to digital is finished using Gammacorrection, Color Correction and Color Space Conversion. Those signals are sent out as digital format 8bit span Y/UV with PCLK, Hsync and Vsync signals as a timing interface. In addition, the Image Processing Function of AE (Auto Iris) and AWB (Auto White Balance) is installed and it is automatically operated following an algorithm in the chip.

Exposure control (Auto Iris) is adjusted by shutter speed.

Setting up of each chip register is set at I2C (IC701:22/23 pin) by CPU (IC101) on Main Board.

CMOS Color Image sensor (IC701)

Operating Power Supply: +2.8V It is supplied by Main Board. (3 Terminal Regulator IC51)

- **+2.8VA: Analogue Part Power**

- **+2.8VD: Digital Part Power**

Package: 40pin CLCC

Image Sensor and its Process Circuit are installed.

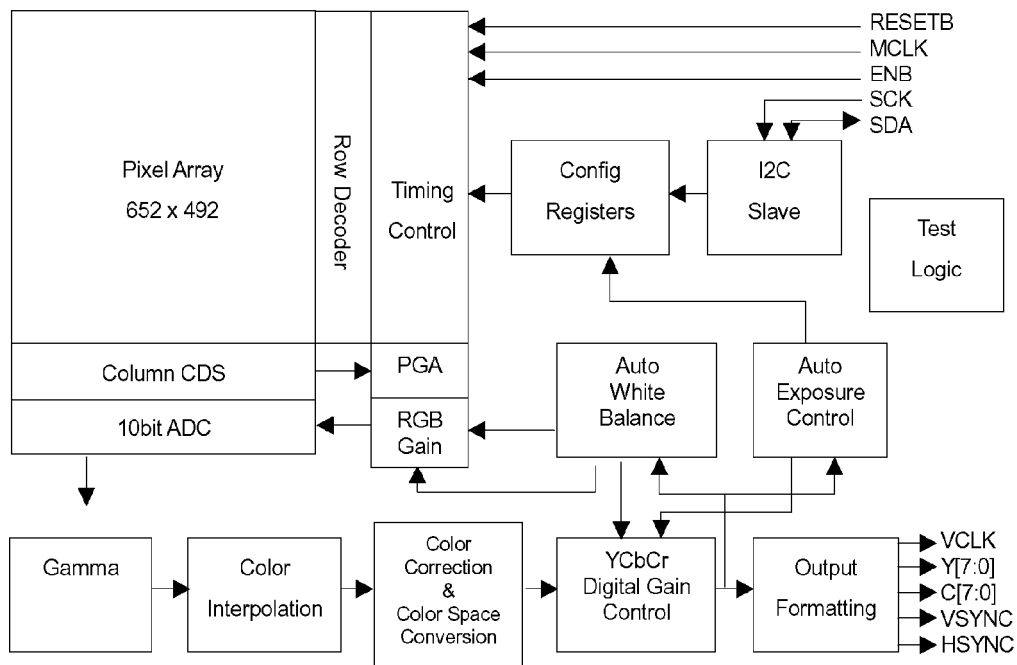

Total Number of Pixels: 652 x 492 pixels

Available Number of Pixels: 652 x 488 pixels

Image Area: 1/4 inch Optical Size

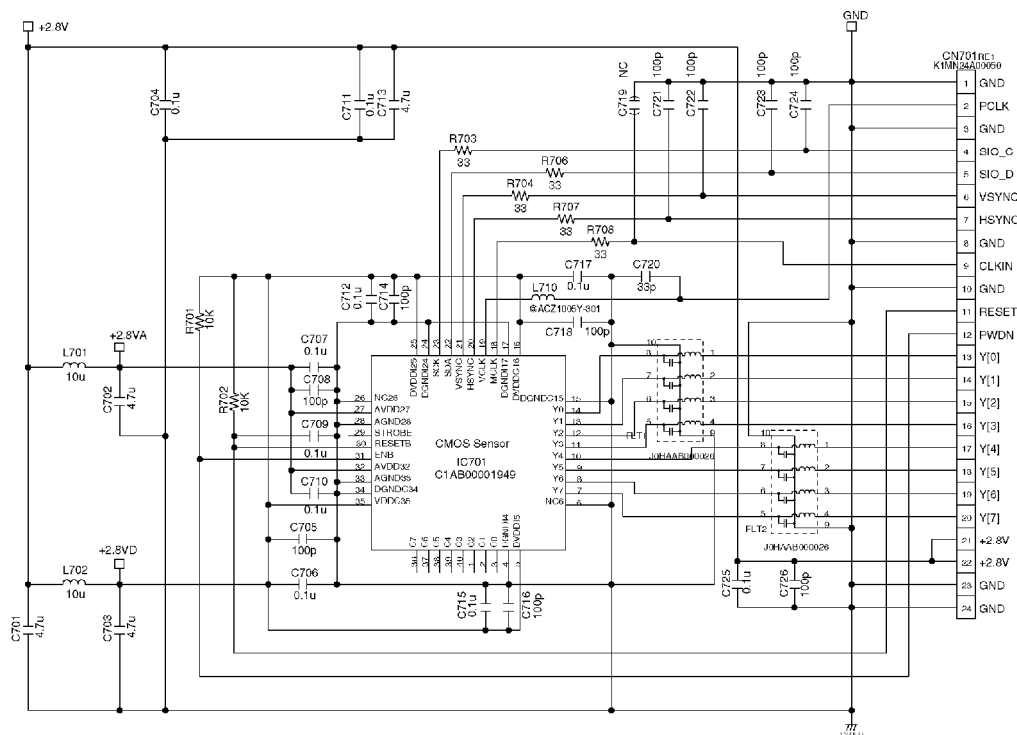

Color Filter: RGB Beyer Alignment

Input Clock: 16.318 MHz (It is supplied by IC101 of Main Board)

**2. Color Correction and Color Space Conversion are merged into one matrix operation for hardware simplification.**

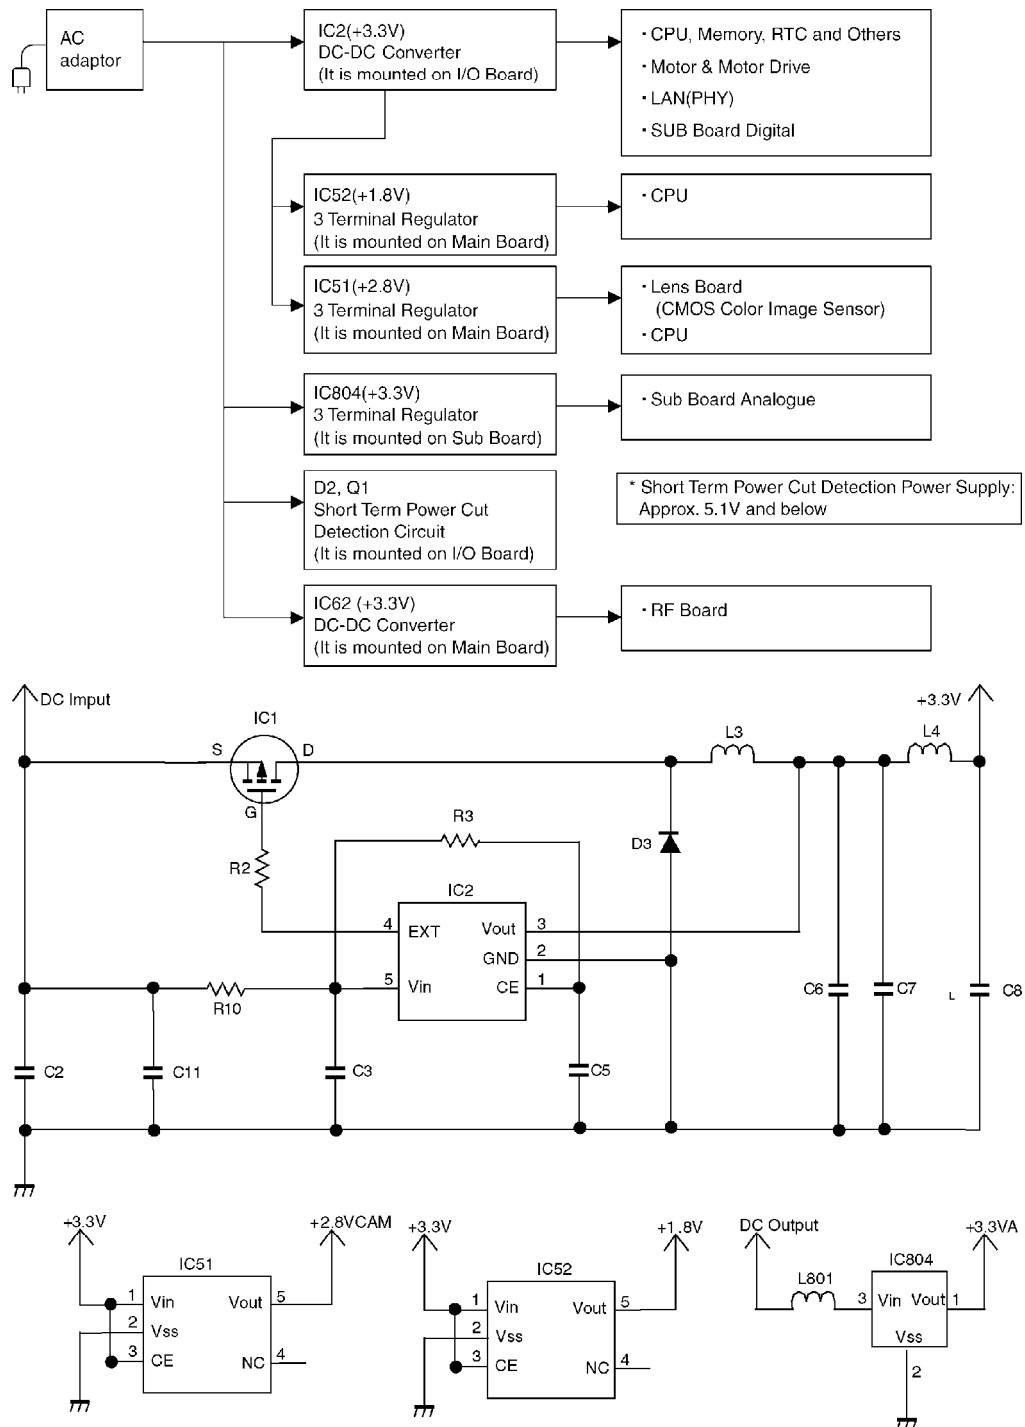

**Detail Circuit Diagram is showed as below.**

### 13.1.4. Power Supply Block

Power Supply Block provides power that each block consumes.

Input is DC 12V/750mA from AC adaptor. The circuit diagram and output voltage are showed as below.

### 13.1.5. RTC

#### Real Time Clock (IC104)

Operating Power Supply: 3.3V (3V battery for back up)

Package: 14 pin SOP

Outline of Operation: Stores Clock Data and supplies 32.768 KHz Clock Signal to CPU (IC101).

Backup Battery provides power when power supply is out.

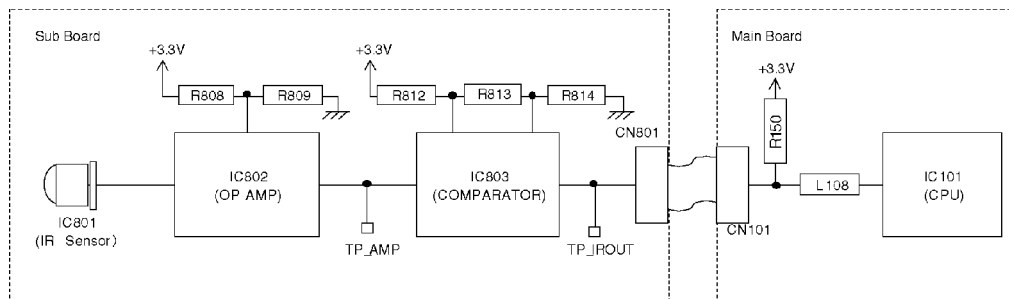

#### Lithium Battery (BAT1)

Output Voltage: 3V

Capacity: 125mAh

Outline of Operation: A backup power supply for Real Time Clock (IC104).

### 13.1.6. Pyroelectric Infrared Sensor Block

#### Pyroelectric Infrared Sensor (IC801)

Operating Power Supply: +3.3V

Package: 3 pin Board Insertion Type

Changes temperature variation into analogue signal which it emits, when a heat source, such as a person, comes into detection area.

The analogue signal is amplified by Operational Amplifier (IC802).

#### 2 Circuits Built-in Operational Amplifier (IC802)

Operating Power Supply: +3.3V

Package: 8 pin SSOP

Amplifies analogue signal from Pyroelectric Infrared Sensor (IC801).

The amplified analogue signal goes into Comparator (IC803).

#### 2 Circuits Built-in Comparator (IC803)

Operating Power Supply: +3.3V

Package: 8 pin SSOP

Composes Window Comparator Circuit. It generates digital signal ( $H \rightarrow L$ ) to CPU, when the amplified analogue signal from Operation Amplifier is over stipulated voltage. (Standard value is about 0.6~1.6V.)

#### Operation of Pyroelectric Infrared Sensor

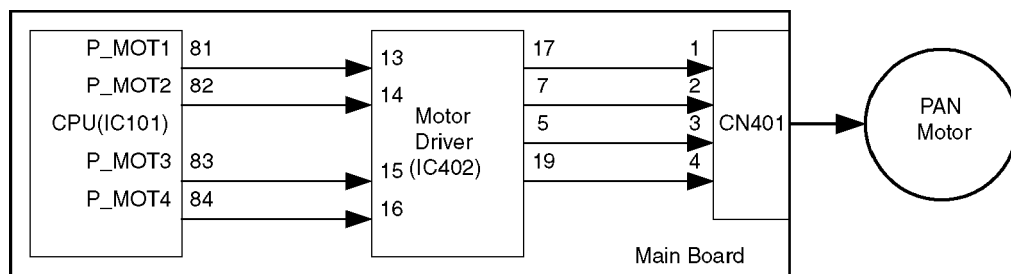

1. **Pyroelectric Infrared Sensor (IC801)** emits analogue signal, when a heat source, such as a person, moves into the detection area.
2. Above signal is amplified by **Operation Amplifier (IC802)** which emits analogue signal.
3. Above signal is input to **Comparator (IC803)** and generates digital signal (H  $\rightarrow$  L), when signal amplitude is over standard voltage.
4. Above digital signal is input to **CPU (IC101)**.

### 13.1.7. PAN Control Block

A pan motor operates, when CPU (IC101) on a Main Board controls the Motor Driver IC (IC402) on the same board.

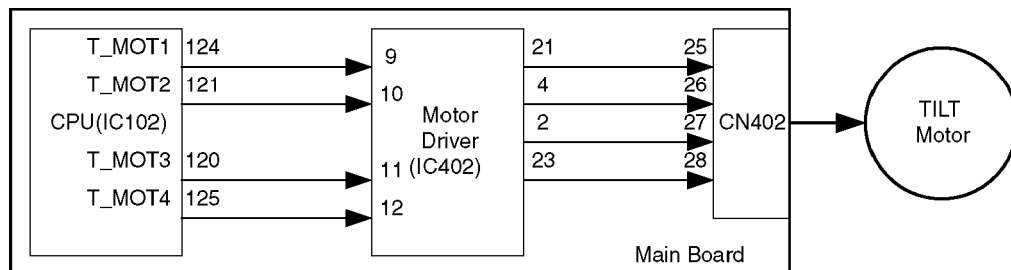

A Constant Voltage Bipolar Drive System is employed. The Voltage of Motor Power (VM) is 3.3V. ø15 Stepping Motors are employed.

### 13.1.8. TILT Motor Control Block

A Tilt motor operates, when CPU (IC101) on a main board controls the motor driver IC (IC402) on the same board.

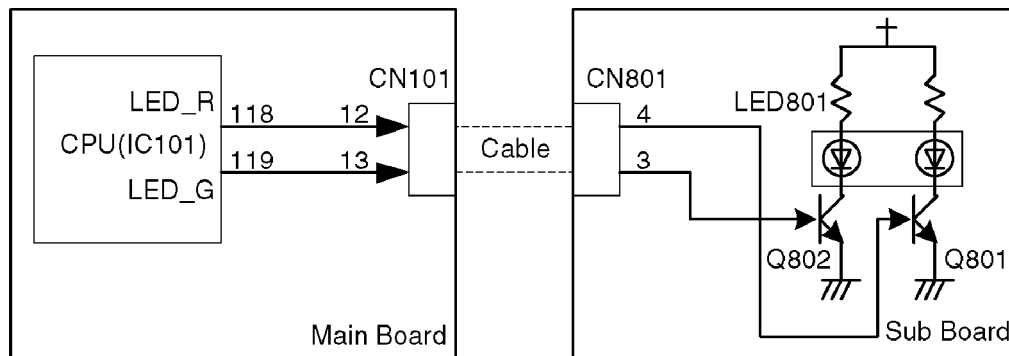

A Constant Voltage Bipolar Drive System is employed. The Voltage of Motor Power (VM) is 3.3V. ø15 Stepping Motors are employed.

### 13.1.9. LED Control Block

LED is controlled by CPU which is mounted on Main Board. Control data is input into LED Control Circuit which is mounted on Sub Board. (Three color LED is employed.)

LED_R	LED_G	Color of LED
L	L	OFF
L	H	Green
H	L	Red
H	H	Orange

## 13.2. RF BLOCK

### - Antenna

Antenna uses a matching circuit and is operated with 1/4 to resonate with 2.45GHz.  
Transmitting/receiving of the external antenna is switched via the Antenna Switch (IC506) of the CPU&MAC/BBIC (IC601).

### - Receiver

The receiving signal from the antenna is input to the RFIC (IC502) after being passed through the Antenna Switch (IC506) and amplified at LNA (Low Noise Amp). The RFIC (IC502) incorporates the LNA (Low Noise Amp), the Mixer for Frequency Converter and the Synthesizer generating the Receiving Local Signal. At the RFIC (IC502), the input signal is separated into the baseband signals of the In-Phase(RxI) and Quadrature (RxQ) to output.

The baseband signal is input to the CPU&MAC/BBIC(IC601) and, after A/D conversion, the data are regenerated.

### - Transmitter

The Data Frame (Data Packet) generated at the built-in MAC Part by the CPU&MAC/BBIC (IC601) is converted to the In-Phase (TxI) and the Quadrature (TxQ) and input to the RFIC (IC502).

At the RFIC (IC502), it is converted to the RF Signal of the transmitting frequency band.

After processing including impedance conversion, level adjustment and control of the unnecessary frequency component, it is sent from the antenna through the Antenna Switch (IC506).

The RF Signal from the Power Amp (IC505) is fed back to the RFIC (IC502) after level detection. The gain is adjusted in the RFIC (IC502) for a constant transmitter output level.

## 14. IC DATA

### 14.1. IC2

# SOT-23-5

Pin No.	Pin Name	Description
1	CE	Chip enable terminal ("H" ACTIVE)
2	GND	GND terminal
3	VOUT (FFB)	Output voltage monitoring terminal
4	EXT	External Tr drive terminal (CMOS output)
6	VIN	Power input terminal

## 14.2. IC51, 52

#### 14.5. IC103

PIN	PIN NAME	DESCRIPTION
CLK	Clock	The system clock input. All other inputs are registered to the SDRAM on the rising edge of CLK
CKE	Clock Enable	Controls internal clock signal and when deactivated, the SDRAM will be one of the states among power down, suspend or self refresh
$\overline{CS}$	Chip Select	Enables or disables all inputs except CLK, CKE and DQM
BA0,BA1	Bank Address	Selects bank to be activated during $\overline{RAS}$ activity Selects bank to be read/written during CAS activity
A0 ~ A11	Address	Row Address : RA0 ~ RA11, Column Address : CA0 ~ CA7 Auto-precharge flag : A10
$\overline{RAS}$ , $\overline{CAS}$ , $\overline{WE}$	Row Address Strobe, Column Address Strobe, Write Enable	$\overline{RAS}$ , $\overline{CAS}$ and $\overline{WE}$ define the operation Refer function truth table for details
LDQM, UDQM	Data Input/Output Mask	Controls output buffers in read mode and masks input data in write mode
DQ0 ~ DQ15	Data Input/Output	Multiplexed data input / output pin
VDD/VSS	Power Supply/Ground	Power supply for internal circuits and input buffers
VDDQ/VSSQ	Data Output Power/Ground	Power supply for output buffers
NC	No Connection	No connection

#### 14.6. IC104

# RX - 8581 SA

## SOP - 14 pin

Pin No.	Pin Name	I/O	Description
2	SCL	I	Inputs I2C-BUS communications serial clock.
3	SDA	I/O	Inputs/Outputs address, data, and acknowledges bit is in synchronization with I2C-BUS communications serial clock.  This terminal is an open drain on output. Connect the proper pull-up resistor depending on the signal line capacity.
14	FOUT	O	This is a C-MOS output terminal with the output controlled by FOE. In case of FOE = "H", FOUT outputs at 32.768kHz. When no output, FOUT is at the "L" level.
10	FOE	I	This is an input terminal that controls the FOUT output state. When this terminal is at the "H" level, FOUT becomes the output state. And when this terminal is at the "L" level, FOUT stops.
7	/INT	O	Outputs an interrupt signal such as the Alarm, Timer, and Time Update. This terminal is an open drain terminal.
11	VDD	-	Connects to +(positive) power supply.
11	(VDD)	-	Same potential as VDD, but do NOT connect externally. Note: RX-8581SA (SOP-14pin) does not have this terminal.
5	GND	-	Connects to ground.
4, 6, 8, 9, 12, 13	N.C.	-	Not connected to the internal IC. OPEN, or connect to GND or VDD. Note: Make sure that the 14pin~22pin in RX-8581NB (SON-22pin), which are the N.C. terminals, are mutually connected by an inner cone.

**Note:**

Be sure to connect a bypass capacitor of more than 0.1  $\mu$  F to the nearest terminal between VDD and GND.

## 14.8. IC201

Pin No.	Pin Name	I/O	Description
14	TP_RXN	I	Twisted-Pair Receive (Data) Negative.
13	TP_RXP	I	Twisted-Pair Receive (Data) Positive.
6	TP_TXN	O	Twisted-Pair Transmit (Data) Negative.
5	TP_TXP	O	Twisted-Pair Transmit (Data) Positive.
55	P0AC	I/O	PHY (Address Bit) 0 / Activity LED.
59	P1CL	I/O	PHY (Address Bit) 1 / Collision LED.
60	P2LI	I/O	PHY (Address Bit) 2 / Link Integrity LED.
62	P3TD	I/O	PHY (Address Bit) 3 / Transmit Data LED.
64	P4RD	I/O	PHY (Address Bit) 4 / Receive Data LED.
2	10/100SEL	I/O	10Base-T / 100Base-TX Select.
9	10TCSR	I	10M Transmit Current Set Resistor.
10	100TCSR	I	100M Transmit Current Set Resistor.
26	ANSEL	I	Auto-Negotiation Select.
24	DPXSEL	I/O	Half-Duplex / Full-Duplex Select.
23	HW/SW	I	Hardware/Software (Select).
27	LOCK	O	(Stream Cipher) Lock (Acquired).
21	LSTA	O	Link Status.
Pin No.	Pin Name	I/O	Description
19	MII/SI	I	Media Independent Interface / Stream Interface (Select).
1	NOD/REP	I	Node/Repeater (Select).
53	REF_IN	I	(Frequency) Reference Input.
52	REF_OUT	I	(Frequency) Reference Output.
18	RESETn	I	(System) Reset (Active Low).
49	COL	O	Collision (Detect).
50	CRS	O	Carrier Sense.
31	MDC	I	Management Data Clock.
30	MDIO	I/O	Management Data Input/Output.
38	RXCLK	O	Receive Clock.
35 34 33 32	RXD0 RXD1 RXD2 RXD3	I	Receive Data 0-3.
36	RXDV	O	Receive Data Valid.
39	RXER	O	Receive Error.
41	RXTRI	I	Receive (Interface), Tri-State.
43	TXCLK	O	Transmit Clock.
45 46 47 48	TXD0 TXD1 TXD2 TXD3	I	Transmit Data 0-3.
44	TXEN	I	Transmit Enable.
42	TXER	I	Transmit Error.

Pin No.	MII Pin Name	100M Symbol Pin Name	I/O	Description
49	COL	-	NC	Collision (Detect).
50	CRS	SCRS	O	Symbol Carrier Sense.
31	MDC	MDC	I	Management Data Clock.
30	MDIO	MDIO	I/O	Management Data Input/Output.
38	RXCLK	SRCLK	O	(Symbol) Receive Clock.
35 34 33 32	RXD0 RXD1 RXD2 RXD3	SRD0 SRD1 SRD2 SRD3	O	Symbol Receive Data 0-3.
36	RXDV	-	NC	Receive Data Valid.
39	RXER	SRD4	O	Symbol Receive Data 4.
41	RXTRI		I	Receive (Interface), Tri-State.
43	TXCLK	STCLK	O	Symbol Transmit Clock.
45 46 47 48	TXD0-3	STD0 STD1 STD2 STD3	I	Symbol Transmit Data 0-3.
44	TXEN	-	NC	Transmit Enable.
42	TXER	STD4	I	Symbol Transmit Data 4.
49	COL	10COL	O	10M (Serial Interface) Collision (Detect).
50	CRS	10CRS	O	10M (Serial Interface) Carrier Sense.
31	MDC	MDC	I	Management Data Clock.
30	MDIO	MDIO	I/O	Management Data Input/Output.
38	RXCLK	10RCLK	O	10M Receive Clock.
35	RXD0	10RD	-	10M (Serial Interface) Receive Data 0.
34 33 32	RXD1 RXD2 RXD3	-	NC	Receive Data 1-3.
36	RXDV	10RXDV	O	10M (Serial Interface) Receive Data Valid.
39	RXER	-	NC	Receive Error.
41	RXTRI		I	Receive (Interface), Tri-State.
43	TXCLK	10TCLK	O	10M (Serial Interface) Transmit Clock.
45	TXD0	10TD	I	10M (Serial Interface) Transmit Data.
46 47 48	TXD1 TXD2 TXD3	-	NC	Transmit Data 1-3.
44	TXEN	10TXEN	I	10M (Serial Interface) Transmit Enable.
42	TXER	-	NC	Transmit Error.

Pin No.	Pin Name	I/O	Description
20	REG	I	

## 14.9. IC402

Pin No.	Pin Name	Description
1	VM1	1ch motor power supply voltage input terminal
2	OUT1A	H-bridge output terminal (1A)
3	PGND	GND terminal
4	OUT2A	H-bridge output terminal (2A)
5	OUT3A	H-bridge output terminal (2A)
6	PGND	GND terminal
7	OUT4A	H-bridge output terminal (4A)
8	VM4	4ch motor power supply voltage input terminal
9	IN1	Control input terminal (H-bridge1)
10	IN2	Control input terminal (H-bridge1)
11	IN3	Control input terminal (H-bridge2)
12	IN4	Control input terminal (H-bridge2)
13	IN5	Control input terminal (H-bridge3)
14	IN6	Control input terminal (H-bridge3)
15	IN7	Control input terminal (H-bridge4)
16	IN8	Control input terminal (H-bridge4)

Pin No.	Pin Name	Description
17	OUT4B	H-bridge output terminal (4B)
18	PGND	GND terminal
19	OUT3B	H-bridge output terminal (3B)
20	VM23	2, 3ch motor power supply voltage input terminal
21	OUT2B	H-bridge output terminal (2B)
22	PGND	GND terminal
23	OUT1B	H-bridge output terminal (1B)
24	VDD	Controller power supply voltage input terminal

## 14.10. IC701

Pin No.	Type	Symbol	Description
1-3	B	C[2:0]	Video Chrominance Data[2:0]
4	G	DGNDI	Digital Ground for I/O Buffer
5	P	DVDDI	Digital Power for I/O Buffer
6	N	NC	No Connection
7-14	O	Y[7:0]	Video Luminance Data[7:0]
15	G	DGNDC	Ground for Internal Digital Block
16	P	DVDDC	Power for Internal Digital Block
17	G	DGNDI	Digital Ground for I/O Buffer
18	I	MCLK	Master Input Clock
19	O	VCLK	Video Output Clock
20	O	HSYNC	Video Horizontal Line Synchronization signal. Image data is valid, when HSYNC is high.
21	O	VSYNC	Video Frame Synchronization signal. VSYNC is active at start of image data frame.
22	B	SDA	I2C Standard data I/O port
23	I	SCK	I2C Clock Input
24	G	DGNDI	Digital Ground for I/O Buffer
25	P	DVDDI	Digital Power for I/O Buffer
26	N	NC	No Connection
27	P	AVDD	Power for Analog Block
28	G	AGND	Ground for Analog Block
29	O	STROBE	Strobe Signal Output
30	I	RESETB	Sensor Reset, Low Active
31	I	ENB	Sensor sleep mode is controlled externally by this pin when sleep mode register bit SCTRB[4] is low. ENB low : sleep mode, ENB high : normal mode
32	P	AVDD	Power for Analog Block
33	G	AGND	Ground for Analog Block
34	G	DGNDC	Ground for Internal Digital Block
35	P	DVDDC	Power for Internal Digital Block
36-40	B	C[7:3]	Video Chrominance Data[7:3]

## 16. HOW TO REPLACE A FLAT PACKAGE IC

### 16.1. PREPARATION

- PbF (: Pb free) Solder

- Soldering Iron

Tip Temperature of 700°F ± 20°F (370°C ± 10°C)

**Note:** We recommend a 30 to 40 Watt soldering iron. An expert may be able to use a 60 to 80 Watt iron where someone with less experience could overheat and damage the PCB foil.

- Flux

Recommended Flux: Specific Gravity → 0.82.

Type → RMA (lower residue, non-cleaning type)

**Note:** See [ABOUT LEAD FREE SOLDER \(PbF: Pb free\)](#) ().

### 16.2. PROCEDURE

1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.

● - - - - - Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

**2. Apply flux to all of the pins on the IC.**

**3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.**

### **16.3. REMOVING SOLDER FROM BETWEEN PINS**

- 1. Add a small amount of solder to the bridged pins.**
- 2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.**

## **17. CABINET AND ELECTRICAL PARTS LOCATION**

# SCREWS

Ref No.	Figure	Parts No.
(A)	$\phi 2 \times 4\text{mm}$	XTW2+4LFJ45
(B)	$\phi 16 \times 6\text{mm}$	XQN16+CJ6FJ
(C)	$\phi 3\text{mm}$	XWA3BFJ
(D)	$\phi 2 \times 4\text{mm}$	XQN2+A4FJK

## MAC address label caution

When you replace the main board, you must also attach the new MAC address label (included with the main board). Attach the new MAC address label to the unit by placing over the old MAC address label. Make sure the old address cannot be seen. Throw away the old main board. It cannot be reused. (If the MAC address of the old main board is already registered via DDNS and then used in a different camera, the camera cannot be used with DDNS service.)

## 18. ACCESSORIES AND PACKING MATERIALS

## 19. REPLACEMENT PARTS LIST

Note:

### 1. RTL (Retention Time Limited)

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The

retention period of availability depends on the type of assembly and the laws governing parts and product retention. At the end of this period, the assembly will no longer be available.

## 2. Important safety notice

Components identified by the  mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. ISO code (Example : ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

## 5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (  $\Omega$  ), k=1000  $\Omega$  , M=1000k  $\Omega$

All capacitors are in MICRO FARADS (  $\mu$  F), p=  $\mu$  (  $\mu$  F)

## 20. FOR THE SCHEMATIC DIAGRAM

Note:

1. DC voltage measurements are taken with an oscilloscope or a tester with a ground.
2. The schematic diagrams and circuit board may be modified at any time with the development of new technology.

**Important safety notice**  
 Components identified by  mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.
